The fascinating topic of small nuclear is becoming more prevalent on the nuclear agenda. The discussions are generally focused within the country of technical origin. In this presentation 'The global outlook for small reactors' Rolls-Royce along with energy business analysts Douglas-Westwood present their shared views on the global opportunities for Small Reactor deployment in the context of the wider energy market.

The presentation will:

- Provide a compressive overview of trends and dynamics relating to Small Reactors in the context of the current world energy market,
- Identify specific Small Reactor opportunities and areas of interest,
- Address the challenges and potential solutions for Small Reactor deployment and operation.

Keywords: *small reactors, world energy market potential*
