

Special Issue on Infection Control

Call for Papers

Infection control is a practical sub-discipline of epidemiology concerned with the prevention of nosocomial or healthcare-associated infection, which includes preventing the transmission of communicable diseases in all health care settings. It demands a basic understanding of the epidemiology of diseases; risk factors that increase patient susceptibility to infection; and the practices, procedures and treatments that may result in infections.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Infection Control**. Potential topics include, but are not limited to:

- Hand hygiene
- Sterilization
- Surveillance for infections
- Infectious diseases
- Nosocomial infection
- Infection prevention and management

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Infection Control**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	July 29th, 2016
Publication Date	September 2016
