

Special Issue on Wireless & Mobile Networks

Call for Papers

A **wireless network** is a computer network that uses wireless data connections between network nodes. Wireless networking is a method by which homes, telecommunications networks and business installations avoid the costly process of introducing cables into a building, or as a connection between various equipment locations.

Mobile network is a communication network where the last link is wireless. The network is distributed over land areas called cells, each served by at least one fixed-location transceiver, but more normally three cell sites or base transceiver stations.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Wireless & Mobile Networks**. Potential topics include, but are not limited to:

- Wireless sensor networks
- Wireless communication network
- Satellite communication networks
- Wireless LAN technologies
- Wireless Ad Hoc networks
- Wireless links
- Wireless access technology
- Multiple access technology
- Broadband & wireless systems
- Cell signal encoding
- CDMA
- Safety study

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Wireless & Mobile Networks**” should be chosen during your submission.

Scientific Research
Open Access

International Journal of Communications, Network and System Sciences

ISSN Online: 1913-3723

According to the following timetable:

Submission Deadline	April 22nd, 2019
Publication Date	June 2019

For publishing inquiries, please feel free to contact the Editorial Assistant at submission.entrance1@scirp.org
