

Special Issue on Geomagnetic Field

Call for Papers

Geomagnetic Field is the magnetic field that extends from the earth's interior to where it meets the solar wind, a stream of charged particles emanating from the sun. Its magnitude at the earth's surface ranges from 25 to 65 microtesla. The magnetic field of the Earth deflects most of the solar wind and the charged particles in the solar wind would strip away the ozone layer, which protects the Earth from harmful ultraviolet rays. As one of the most important research fields of human life, **geomagnetic field** is of great attractions to researchers.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **geomagnetic field**. In this special issue, potential topics include, but are not limited to:

- Earth's magnetic field
- Currents in the ionosphere and magnetosphere
- Magnetic anomalies
- Magnetic dip
- Magnetic declination
- Magnetosphere
- Geomagnetic jerk

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Geomagnetic Field**” should be chosen during your submission.

Also please note the following timetable:

Submission Deadline	July 10th, 2014
Publication Date	September 2014
