

## Special Issue on Research on The Interior of The Earth

### Call for Papers

The interior of Earth is not subject to direct investigation, but its properties must be indirectly deduced from the study of earthquake waves that propagate through the interior rocks. A knowledge of earth's interior is essential for understanding plate tectonics. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **research on the interior of the earth**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **research on the interior of the earth**. In this special issue, potential topics include, but are not limited to:

- Material composition in the interior of the earth
- The earth interior physics
- The earth interior chemical
- Earth's internal structure
- The origin of the earth
- Evolution of the earth's lithosphere, mantle and core
- Evidence for internal earth structure and composition
- Core-mantle boundary

Authors should read over the journal's [Authors' Guidelines](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Research on The Interior of The Earth**” should be chosen during your submission.

Also please note the following timetable:

Submission Deadline	March 18th, 2015
Publication Date	May 2015
