

## Special Issue on Sedimentology & Stratigraphy

### Call for Papers

Sedimentology is a branch of geology concerned with sedimentary rocks and deposits (such as sand, silt, and clay) and the processes that result in their formation (erosion and weathering), transport, deposition and diagenesis. It is closely linked to stratigraphy, which studies the relationships between rock layers and how they can shift and move.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Sedimentology & Stratigraphy**. Potential topics include, but are not limited to:

- Clastic rocks
- Aquifers
- Diagenesis
- Sequence stratigraphy
- Architectural uses
- Lithostratigraphy
- Biostratigraphy
- Chronostratigraphy
- Magnetostratigraphy
- Archaeological stratigraphy

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Sedimentology & Stratigraphy**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	December 31st, 2015
Publication Date	February 2016
