# Special Issue on Geochemistry and Isotope Research

## Call for Papers

Geochemistry is the branch of Earth Science that applies chemical principles to deepen an understanding of the Earth system and systems of other planets. Geochemists consider Earth composed of discrete spheres - rocks, fluids, gases and biology - that exchange matter and energy over a range of time scales. An appreciation for rates of reactions and the range of physical conditions responsible for the chemical expressions of each sphere provides the framework to study the co-evolution of the solid Earth, its oceans, atmosphere, biosphere, and climate. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of geochemistry and isotope.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **geochemistry and isotope research**. In this special issue, potential topics include, but are not limited to:

- Isotope geochemistry
- Cosmochemistry
- Biogeochemistry
- Organic geochemistry
- Regional, environmental and exploration geochemistry
- Photogeochemistry

Authors should read over the journal's  For Authors  carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's Paper Submission System.

Please kindly notice that the "**Special Issue**" under your manuscript title is supposed to be specified and the research field "**Special Issue -** *Geochemistry and Isotope Research*" should be chosen during your submission.

Special Issue timetable:

| | |
|---|---|
| Submission Deadline | December 8th, 2016 |
| Publication Date | February 2017 |
