

## Special Issue on Research on Universal Gravitation

### Call for Papers

Newton's law of universal gravitation states that a particle attracts every other particle in the universe using a force that is directly proportional to the product of their masses and inversely proportional to the square of the distance between them. Newton's law has since been superseded by Einstein's theory of general relativity, but it continues to be used as an excellent approximation of the effects of gravity in most applications. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of universal gravitation.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **research on universal gravitation**. In this special issue, potential topics include, but are not limited to:

- Newton's theory of gravitation
- Gravity and quantum mechanics
- Earth's gravity
- Gravity and astronomy
- Gravitational radiation
- Speed of gravity
- Gravitational field

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Research on Universal Gravitation**” should be chosen during your submission.

Special Issue timetable:

Submission Deadline	February 8th, 2017
Publication Date	April 2017

#### Guest Editor:

Prof. Jacques Bourgois; Université Pierre et Marie Curie, Paris 6, France  
Prof. Shuanggen Jin ; Shanghai Astronomical Observatory, CAS, China
