

Special Issue on Earth Structure and Geodynamics

Call for Papers

Geodynamics is concerned with the physical processes that drive motion like mountain building or plate tectonics in the Earth and planets. By its nature it is highly interdisciplinary, and provides the link between such diverse areas in the Earth sciences as tectonics, paleomagnetism, seismology, mineral physics, geo-chemistry or geodesy. There are many connections between these fields. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **earth structure and geodynamics**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **earth structure and geodynamics**. In this special issue, potential topics include, but are not limited to:

- Dynamics of the Earth
- Seafloor spreading
- Mountain building
- Volcanoes, earthquakes and faulting
- Earth's physics and geodesy
- The Earth's magnetic field

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Earth Structure and Geodynamics**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	March 7th, 2019
Publication Date	May 2019
