

Special Issue on Application of Geoscience in Engineering

Call for Papers

Engineering geology is an applied component of geology, which deals with strength and mechanical behaviour of rocks and soils. This applied knowledge of geology helps in locating the feasible site for natural hazard management, environmental protection management, mining, power plant, dam, tunnels, highways, railways, bridges, multi-story buildings etc. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of **Application of Geoscience in Engineering**.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Application of Geoscience in Engineering**. In this special issue, potential topics include, but are not limited to:

- Geotechnical engineering
- Rocks and minerals
- Structural geology
- Geographic information systems
- Hydraulic engineering
- Rock mechanics

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue - Application of Geoscience in Engineering**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	April 28th, 2020
Publication Date	June 2020
