

Special Issue on Heterocyclic Chemistry Research

Call for Papers

Compounds classified as heterocyclic probably constitute the largest and most varied family of organic compounds. Heterocyclic chemistry constantly grows in scope and importance, and the compounds constitute the core of all life processes, controlling hereditary information through nucleic acids and evolution through mutations. Heterocycles are also widely applications in pharmaceutical and biotechnology, photography and reprographics, agriculture chemistry, dyestuffs, kinds of additives and polymers. The goal of this Special Issue is to provide a platform for scientists worldwide to promote, share, and discuss various new issues and developments in the area of heterocyclic chemistry.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **heterocyclic chemistry research**. Potential topics include, but are not limited to:

- Heterocyclic compounds (Pyrrole, Imidazole, Pyrazine, Indoles, etc.)
- Larger ring heterocycles
- Structures, physical, and spectroscopic features
- Chemical properties
- Reactions
- Synthesis
- Applications

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Heterocyclic Chemistry Research**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	April 30th, 2015
Publication Date	June 2015

Guest Editor:

Scientific Research
Open Access

**International Journal of
Organic Chemistry**
ISSN Online: 2161-4695
