

Special Issue on Organometallic Chemistry

Call for Papers

Organometallic chemistry is the study of chemical compounds containing at least one bond between a carbon atom of an organic compound and a metal. Organometallic chemistry combines aspects of inorganic chemistry and organic chemistry. Organic compounds incorporating carbon-metal bonds are called organometallic compounds. The unique properties of the organometallic compounds make them widely used in many fields.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on exploring **Organometallic Chemistry**. Potential topics include, but are not limited to:

- Organometallic compounds
- Coordination compounds
- Bio-organometallic compounds
- Gilman Reagents
- Metallocenes
- Reactivity of organometallic compounds
- Organometallic compound synthesis
- Organometallic catalysis
- Functionalized Organometallic Reagents
- Organometallic structure, properties and mechanisms
- Applications of organometallic compound
- Organometallics in environment and toxicology

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Organometallic Chemistry**” should be selected during your submission.

Special Issue Timetable:

Submission Deadline	April 10th, 2016
Publication Date	June 2016

Scientific Research
Open Access

**International Journal of Organic
Chemistry**
ISSN Online: 2161-4695
