

## Special Issue on Organic Compound and Its Derivatives

### Call for Papers

Derivatives are complex products derived from the substitution of hydrogen atoms or atoms in a compound by other atoms or functional groups. Common functional groups include -OH, -COOH, -CHO, -NH<sub>2</sub> and so on. The frequently occurring reactions are substitution, addition, elimination, addition and polycondensation, oxidation and reduction of organic compounds, etc. Organic compounds and their derivatives play an important role in the chemical industry.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **organic compound and its derivatives**. Potential topics include, but are not limited to:

- Organic Compounds
- Acid Derivatives
- Hydrocarbon derivatives
- Organometallic derivatives
- Design, Synthesis of organic compound and its derivatives
- Application of organic compound and its derivatives

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Organic Compound and Its Derivatives**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 19th, 2018
Publication Date	March 2018
