

## Special Issue on Organic Compound and Its Derivatives

### Call for Papers

Organic compounds are, at the most basic level, compounds that contain carbon and hydrogen. These compounds are called organic because they were once believed to have been derived from living things, but that is not necessarily the case. There are millions of organic compounds that occur naturally or can be produced synthetically. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Organic Compound and Its Derivatives**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Organic Compound and Its Derivatives**. In this special issue, potential topics include, but are not limited to:

- Organoheterocyclic compounds
- Natural compounds
- Synthetic compounds
- Structural characteristics of organic compounds
- The chemistry characteristics of organic compounds
- Physical properties of organic compounds
- Synthesis of organic compounds

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Organic Compound and Its Derivatives**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	January 29th, 2023
Publication Date	March 2023
