

## Special Issue on Heterocyclic Chemistry Research

### Call for Papers

Heterocyclic Chemistry Research is a field of scientific study that focuses on the synthesis, properties, and applications of heterocyclic compounds. Heterocyclic compounds are organic compounds that contain at least one ring structure made up of carbon atoms and at least one other heteroatom, such as nitrogen, oxygen, or sulfur. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in this area of **Heterocyclic Chemistry Research**.

In this special issue, we invite front-line researchers and authors to submit original research and review articles that explore **Heterocyclic Chemistry Research**. In this special issue, potential topics include, but are not limited to:

- Heterocyclic compounds (Pyrrole, Imidazole, Pyrazine, Indoles, etc.)
- Structure, properties and characterization
- Images of rings with one heteroatom
- Synthetic methods
- Reactions
- Bioorganic chemistry
- Larger ring heterocycles
- Applications of hetrocyclic compounds

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly specify the “**Special Issue**” under your manuscript title. The research field “**Special Issue - Heterocyclic Chemistry Research**” should be selected during your submission.

Special Issue timetable:

Submission Deadline	December 28th, 2023
Publication Date	February 2024
