

Special Issue on Advances in Geomechanics

Call for Papers

Geomechanics is a discipline that studies the laws of crustal structure and crustal movement with the principle of mechanics. In the aspect of mineral geological mechanics and environmental geology, engineering geology, earthquake geology, petroleum geology and regional stability research, especially for oil, coal, mineral exploration and geological disaster prediction, geomechanics has played an important role. The goal of this special issue is to provide a platform for scientists and academicians all over the world to promote, share, and discuss various new issues and developments in the area of advances in geomechanics.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **advances in geomechanics**. Potential topics include, but are not limited to:

- Tectonic system of geomechanics
- Geomechanical model
- Continental dynamics
- Geotechnical mechanics
- Geological hazard monitoring and prediction
- Dynamic diagenesis and mineralization
- Crustal movement and crustal stability
- Petroleum resources assessment

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Advances in Geomechanics**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	January 30th, 2018
Publication Date	March 2018
