

Special Issue on Geomagnetism Research

Call for Papers

The research contents of geomagnetism are mainly divided into two parts: basic magnetic field and variation magnetic field. The basic magnetic field is derived from the interior of the earth, and the study of its variation and origin has been one of the most important aspects of geodynamics. The variation of magnetic field is related to the change of the ionosphere and solar activity. The study of ancient rock magnetic field has promoted the study of plate tectonics theory. Geomagnetism is developing in the application phase.

In this special issue, we intend to invite front-line researchers and authors to submit original researches and review articles on exploring **geomagnetism research**. Potential topics include, but are not limited to:

- Paleomagnetism
- Geomagnetic survey
- Rock magnetism
- Crustal structure and geomagnetism
- Environmental magnetism
- Biomagnetism
- Earthquake prediction and geomagnetism

Authors should read over the journal's [For Authors](#) carefully before submission. Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Geomagnetism Research**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	February 27th, 2018
Publication Date	April 2018
