

Special Issue on
Psychological Assessment and Psychometrics
Call for Papers

Psychological assessment defined as a way of assessing an individual's behavior, personality, cognitive abilities, and several other domains. The purpose behind many modern psychological evaluations is to try to pinpoint what is happening in someone's psychological life that may be inhibiting their ability to behave or feel in more appropriate or constructive ways; it is the mental equivalent of physical examination. Other psychological evaluations seek to better understand the individual's unique characteristics or personality to predict things like workplace performance or customer relationship management. Psychometrics is a field of study concerned with the theory and technique of psychological measurement.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Psychological Assessment and Psychometrics**. Potential topics include, but are not limited to:

- Psychometric issues and empirical studies
