SUPPLEMENTARY MATERIAL

FigureS1. UV-Vis spectra of control solutions. Absorbance is shown as a function of wavelength. Each aqueous solution initially contained 1.62 M methylglyoxal and: no salt, 5.1 M NaCl, 1.18 M Na₂SO₄, 8.7 M NH₄NO₃, or 3.1 M (NH₄)₂SO₄. Also shown is the spectrum of a solution initially containing 1.62 M methylglyoxal and 3.1 M (NH₄)₂SO₄ which was protected from light until analysis. All spectra were obtained 24 h after mixing, except for the NH₄NO₃ solution, which was measured at 96 h.

Table S1. B3LYP/ERMLER2 calculated total Gibbs free energies. Labels refer to Table 2 in the text. “cluster” denotes the cluster of the species with I⁻.
