Due to the limited space in the main context, the results of small estuaries (the Somme and Vilaine) are presented in the supplement.

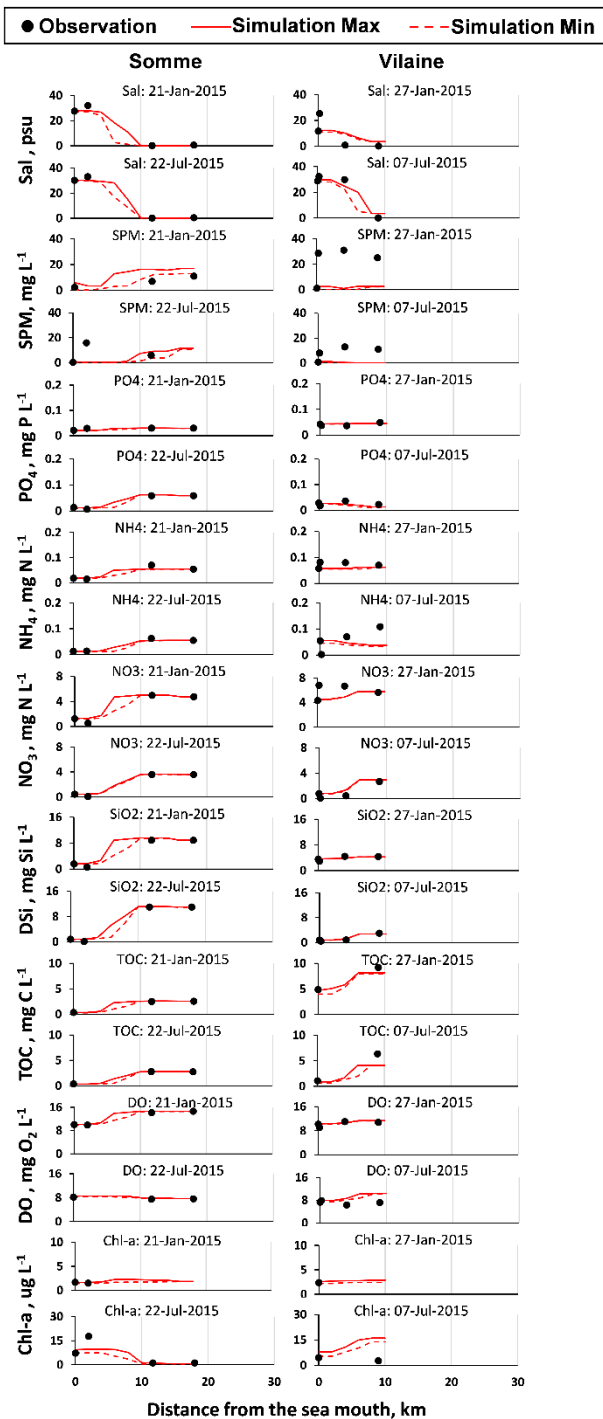

Figure S- 1 Salinity (Sal), suspended particulate matter (SPM) and nutrients (PO₄, NH₄, NO₃, DSi, TOC), dissolved oxygen (DO), chlorophyll a (Chl-a) concentrations variations along the estuaries (the Somme and Vilaine) for two selected dates (one in winter and the other one in summer). Note the different scales for the Chl-a for the estuaries.

Figure S- 2 Temporal variations for phosphate (PO₄), ammonium (NH₄), nitrate (NO₃), dissolved silica (DSi), total organic carbon (TOC), dissolved oxygen (DO), and chlorophyll a (Chl-a) concentrations from 2014 to 2016 for the Somme and Vilaine estuaries at the sampling stations located about 1/2 the length of the estuary to the sea mouth. Gray columns covered the year of calibration (2015).
