Introduction

Employing industry-leading communication technologies and control algorithms, the DJI Force Pro is a camera movement control system that allows operators to control gimbals remotely with high accuracy. By precisely synchronizing operator movement with camera movement, the Force Pro allows operators to masterfully capture complicated shots more intuitively than ever.

Used with the DJI wireless receiver, Force Pro's dual-frequency 2.4 GHz and 5.8 GHz wireless transmission system delivers a control distance of up to 3 km (unobstructed and free of interference). It also supports a wired connection, which eliminates interference with other equipment on a film set.

The screen and dedicated buttons make it easy to set up parameters on the Force Pro and gimbal. Featuring a 4730 mAh battery that offers up to 5 hours of continuous operation, the Force Pro has enough power for an entire shoot.

The Force Pro is currently compatible with RONIN™ 2, Ronin-S and Inspire 2, with support for more devices coming soon. It can be mounted on a tripod or used handheld with the adapter.
