Thank you for these comments on our paper. I'm not sure why the pdf version that appeared on GMD did not have active hyperlinks because the Word version I uploaded did. Here is the link to the model and sample data:

<https://github.com/blissville71/STORM>

We will change the paper title to include the model's version number (1.0) according to the editor's suggestion. We will also generate a DOI for this version of the code and provide that. Finally we will revise the section on 'Code Availability'.
