

Supplement of

Past and future climate change effects on the thermal regime and oxygen solubility of four peri-alpine lakes

Olivia Desgué-Itier et al.

The supplementary contain Figures S1 to S6 followed by Tables S1 to S7.

Supplementary Figures

5

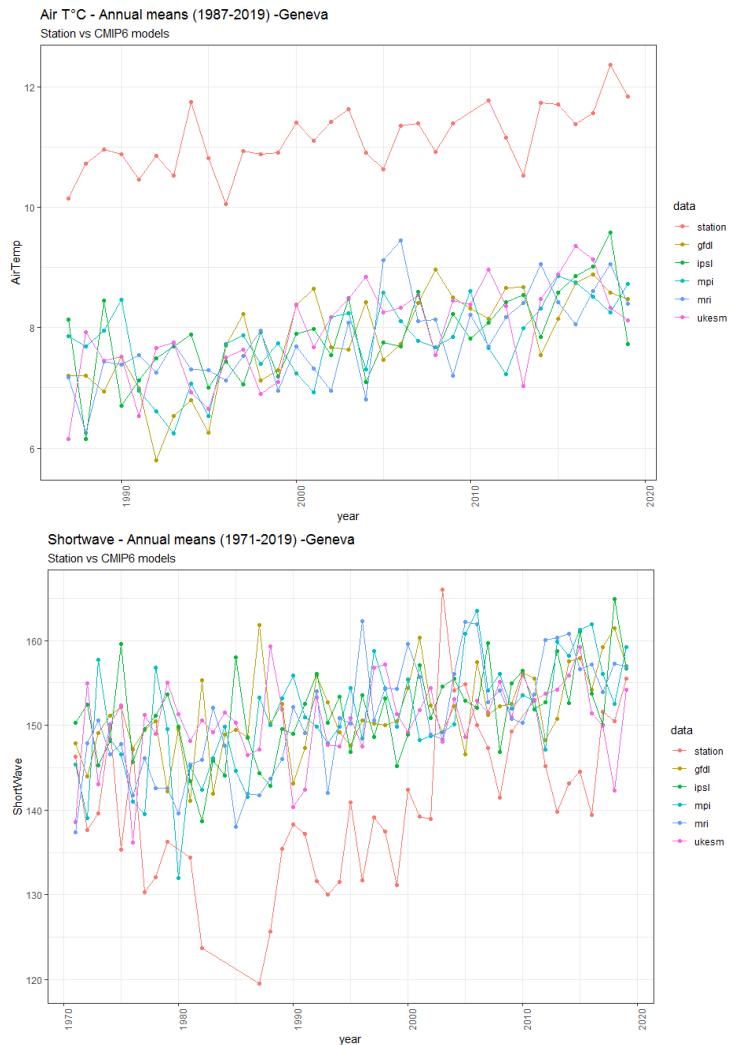

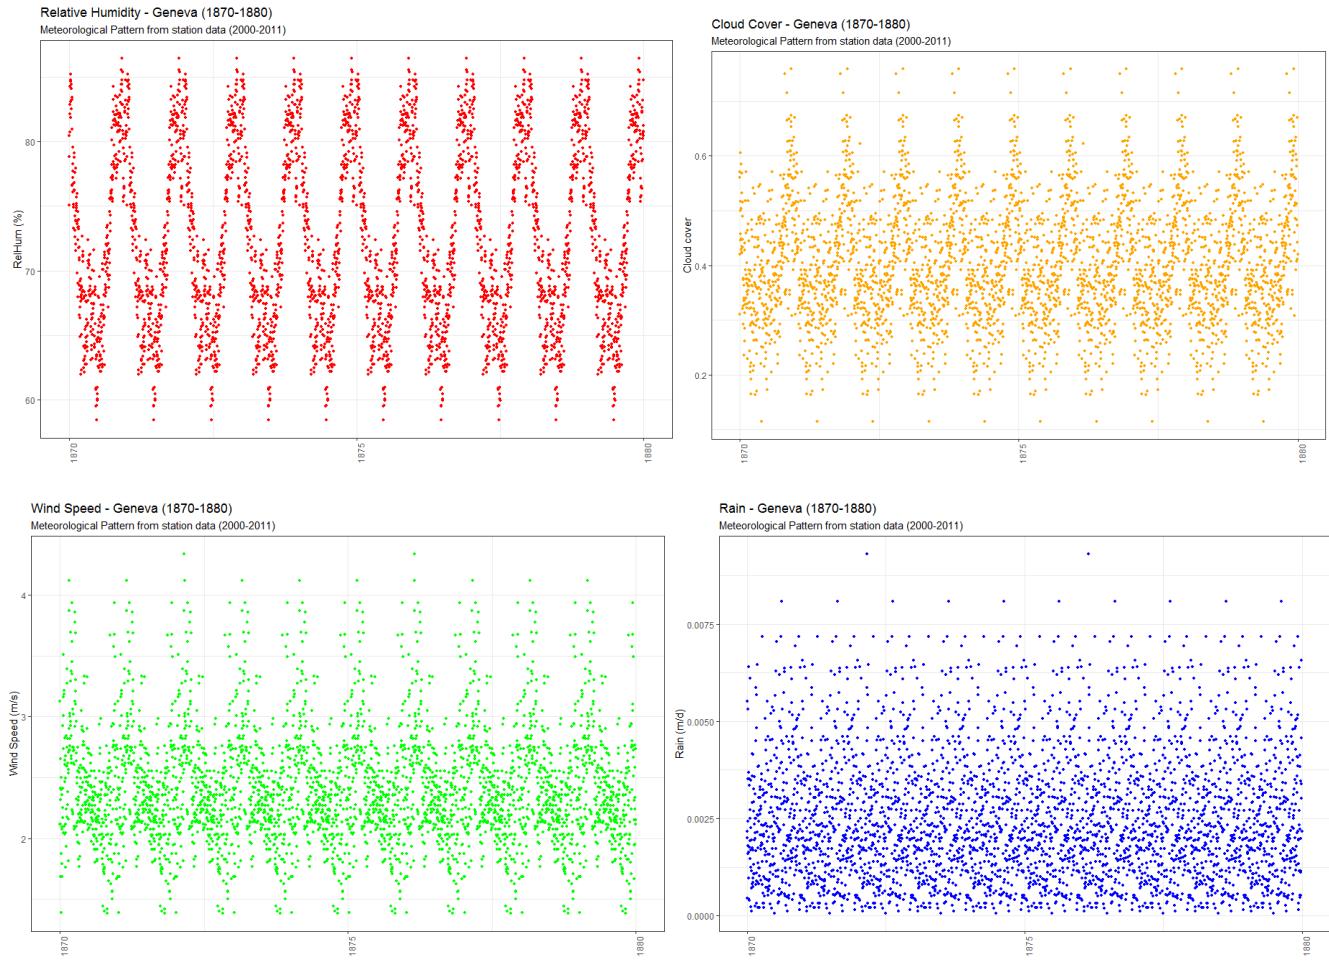

Figure S1. Evolution of air temperature (A) and shortwave radiation (B) of the five climatic models extracted from ISIMIP3b (CMIP6): GFDL-ESM4, MPI-ESM1-2-HR, MRI-ESM2-0, IPSL-CM6A-LR and UKESM1-0-LL. Comparison to 10 the closest meteorological station to Lake Geneva: Thonon-les-Bains station. Correction of the climatic model's data relative to the altitude was applied (c.f. Method section).

15

Figure S2. Daily meteorological time series. Relative humidity, Cloud cover, Wind speed and Rain estimated from the longest period with available data are represented here.

20

25

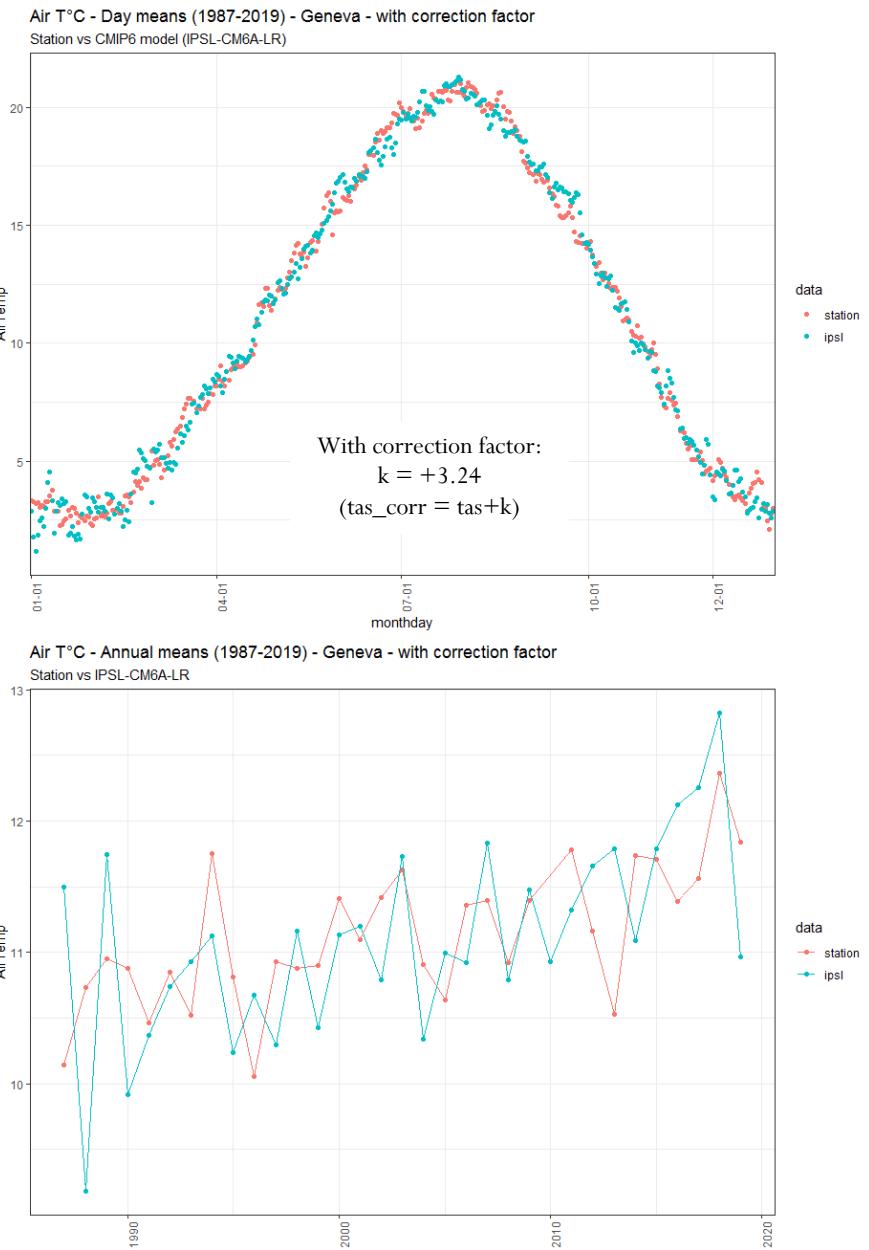

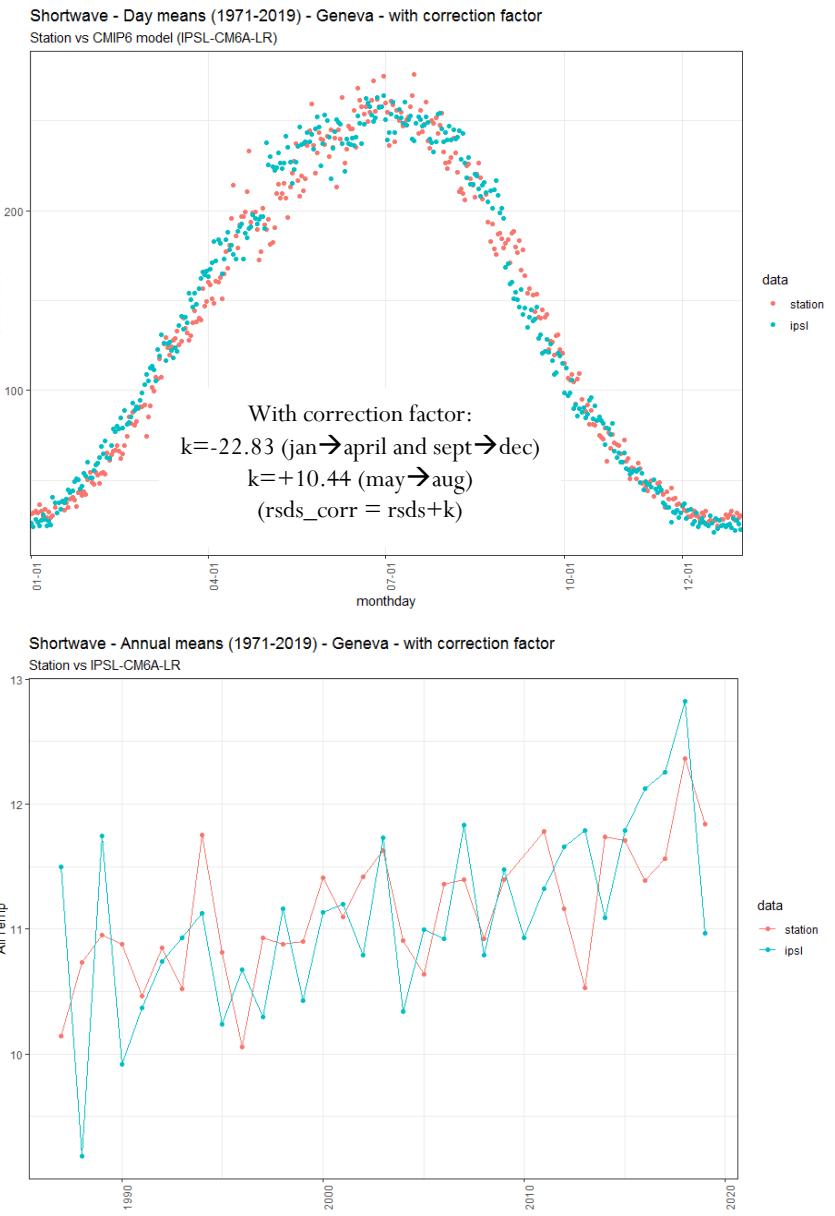

Figure S3. Comparison of annual and daily mean air temperature from meteorological station (red) and IPSL-CM6A-LR model (blue) with correction factor.

35

Figure S4. Comparison of annual and daily mean shortwave radiation from meteorological station (red) and IPSL-CM6A-LR model (blue) with correction factor. Correction of the climatic model's data relative to the altitude was applied (c.f. Method section).

40

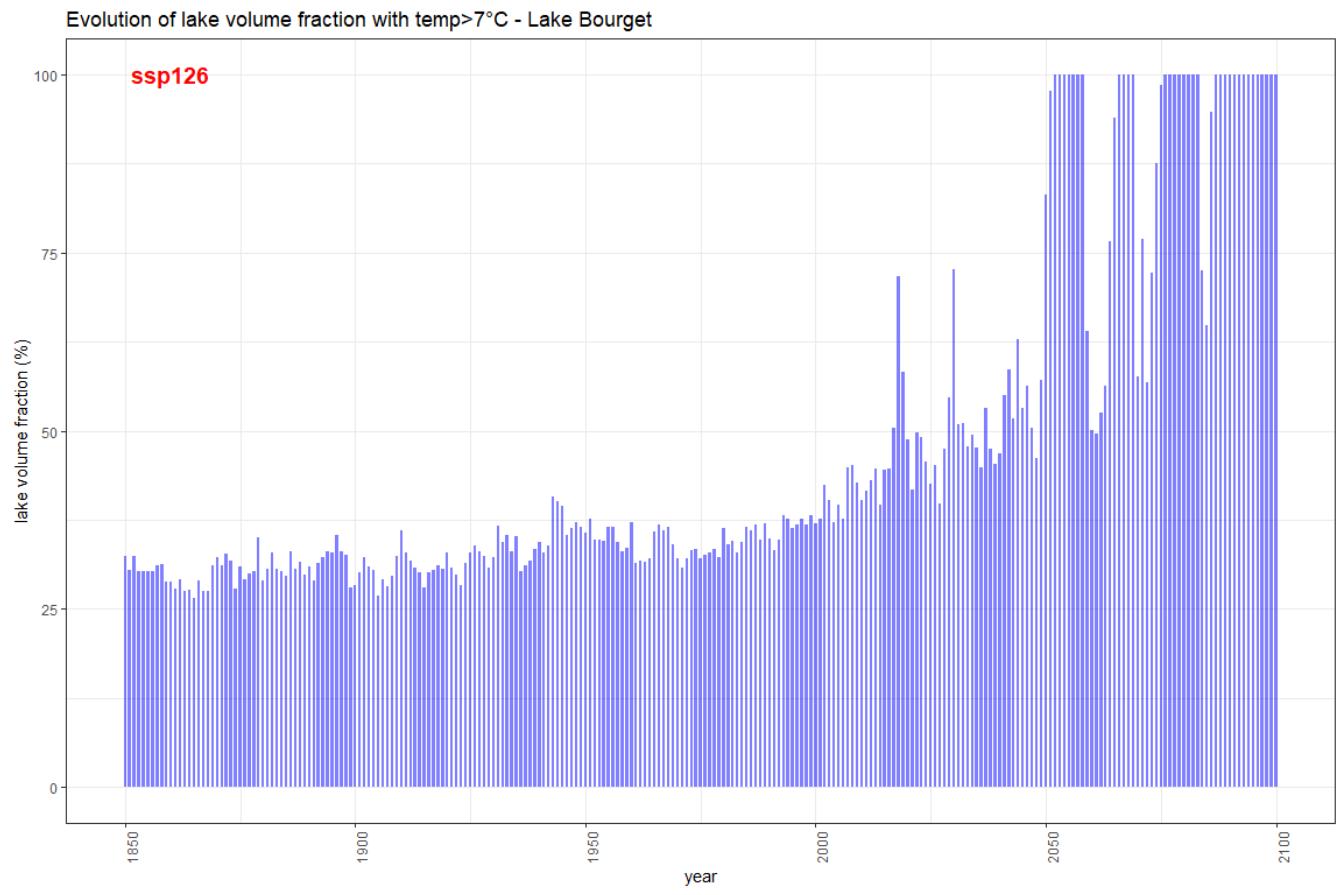

Figure S5. Annual averages of lake volume fraction (%) with temperature above 7 °C in Lake Bourget, over the period

45 1850-2100, according to ssp126 scenario, calculated from MyLake water temperature simulations.

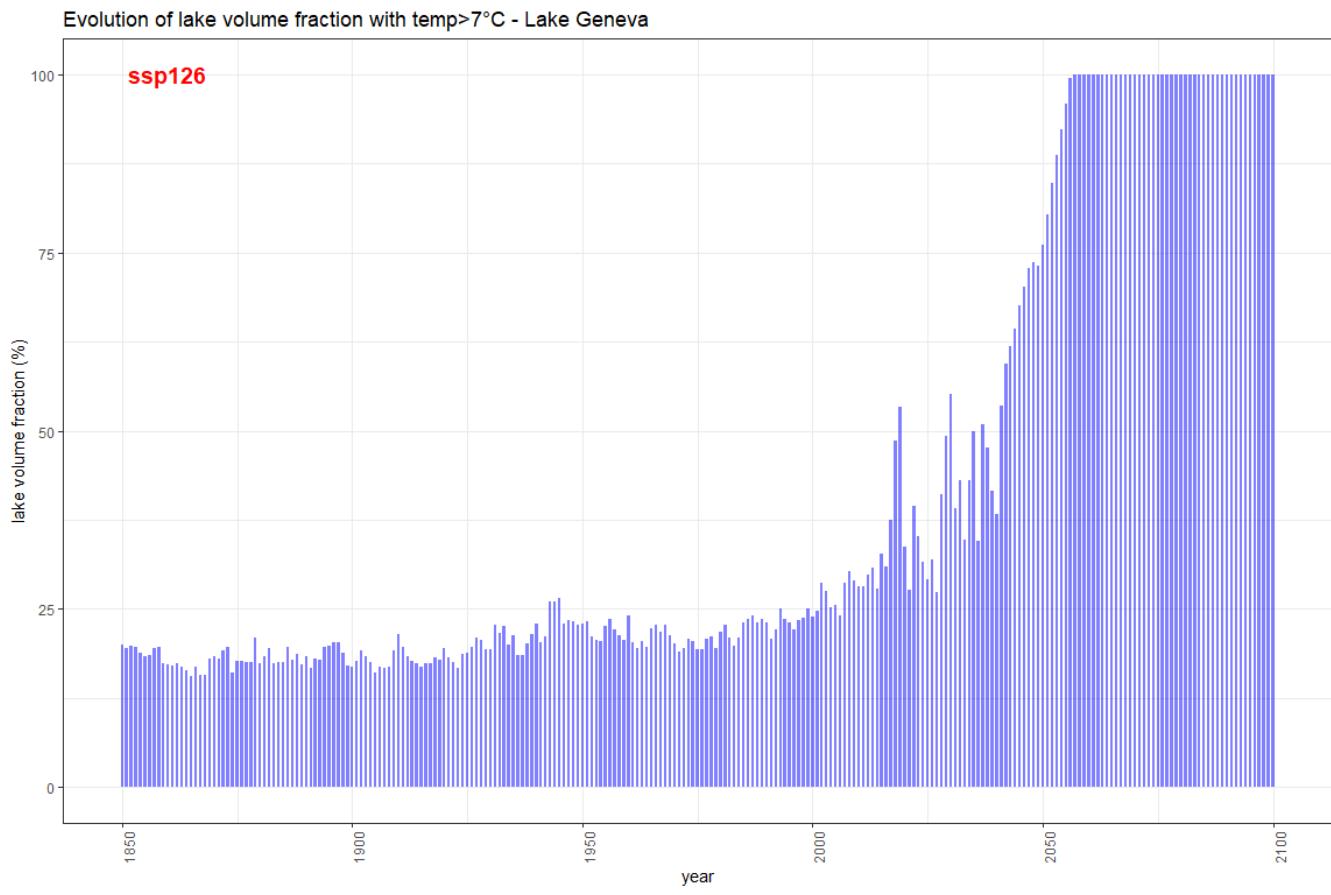

Figure S6. Annual averages of lake volume fraction (%) with temperature above 7 °C in Lake Geneva, over the period 1850-2100, according to ssp126 scenario, calculated from MyLake water temperature simulations.

Supplementary Tables

55

Table S1. Performance metrics (Root mean square error, normalized mean absolute error, Pearson correlation coefficient) to select the most performant climate model for air temperature and shortwave radiation predictions.

	Air Temperature			Shortwave		
	RMSE	NMAE	r	RMSE	NMAE	r
GFDL-ESM4	4.40	2.01	0.805	77.74	0.759	0.687
IPSL-CM6A-LR	4.27	1.57	0.814	76.84	2.374	0.692
MPI-ESM1-2-HR	4.39	1.90	0.804	77.20	0.761	0.691
MRI-ESM2-0	4.34	10.28	0.809	78.03	2.453	0.686
UKESM1-0-LL	4.21	4.54	0.811	77.62	2.145	0.686

60

Table S2. Climate forcing data

Model title	Institution	Ensemble member
GFDL-ESM4	National Oceanic and Atmospheric Administration, Geophysical Fluid Dynamics Laboratory, Princeton, NJ 08540, USA	r1i1p1f1
IPSL-CM6-LR	Institut Pierre Simon Laplace, Paris 75252, France	r1i1p1f1
UKESM1-0-LL	Met Office Hadley Centre, Fitzroy Road, Exeter, Devon, EX1 3PB, UK	r1i1p1f2
MPI-ESM1-2-HR	Max Planck Institute for Meteorology, Hamburg 20146, Germany	r1i1p1f1
MRI-ESM2-0	Meteorological Research Institute, Tsukuba, Ibaraki 305-0052, Japan	r1i1p1f1

65

70 **Table S3. Sensitivity tests on climate variables** from MyLake water temperature simulations over a 10-year period, for the 4 perialpine lakes (Geneva, Annecy, Bourget and Aiguebelette). Performance metrics calculation (RMSE and R2) with $\pm 20\%$ to each climate variable independently ($\Delta = |\text{RMSE/R2 raw data} - \text{RMSE/R2} \pm 20\%|$)

Lake	Variable	RMSE					R2				
		raw data	+20 %	Δ	-20 %	Δ	raw data	+20 %	Δ	-20 %	Δ

Table S4. Model parameters calibrated over the 10-years calibration period

Model	Parameters
FLake	Scaling factors for wind speed, and shortwave radiation (wind_factor, sw_factor), depth_w_lk, extincoef_optic, c_relax_C, fetch_lk, depth_bs_lk, T_bs_lk
GLM	Scaling factors for wind speed, and shortwave radiation (wind_factor, sw_factor), Kw, min_layer_thick, max_layer_thick, coef_mix_conv, coef_wind_stir, coef_mix_shear, coef_mix_turb, coef_mix_KH, coef_mix_hyp
GOTM	Scaling factors for wind speed, and shortwave radiation (wind_factor, sw_factor), k_min
Simstrat	Scaling factors for wind speed, and shortwave radiation (wind_factor, sw_factor), a_seiche, f_wind, q_nn, c10, cd
MyLake	Scaling factors for wind speed, and shortwave radiation (wind_factor, sw_factor), C_shelter

80

Table S5. Models performance comparison over 10-years calibration and validation periods (depending on each lakes data availability) for Lakes Geneva, Annecy, Bourget and Aiguebelette.

95

Table S7. Annual means of Schmidt stability over the past 30 years (1990-2020) and in the future projections (2070-2100) according to the 3 scenarios (ssp126, ssp370 and ssp585), for the four lakes (Geneva, Annecy, Bourget and Aiguebelette). Increases per decade calculated for the different periods, from MyLake water temperature simulations on the entire water column and on the upper 50 meters of each lake.

100

Thermal indice	Lake	Scenario	Period	Significance	Raise per decade ($J\cdot m^{-2}$)	Means in groups ($J\cdot m^{-2}$)	Significance
