

# SINGLE PASS COLLIDER MEMO CN-308

AUTHOR: J. Silva and W.T. Weng

DATE: Apr. 10, 1986

TITLE: NOMENCLATURE OF SLC ARC BEAMLINE COMPONENTS\*

This note defines I&C formal names for beamline components in the Arc specified in the TRANSPORT decks ARCN FINAL and ARCS FINAL of Jun 5, 1985. D. Walz's drawings are the basis for the inputs to the special sections. A complete and up-to-date TRANSPORT deck for the whole system is being worked out by J. Murray and T. Fieguth.

The formal name consists of three fields: the primary name, the zone and the unit number. The general principles and guidelines are explained in Reference 1. In the following, we will explain the rationale and the final resolutions of the naming conventions for the Arc in that order.

## A. PRIMARY NAMES:

Most of the primary names follow the conventions defined by I&C department( CN-118), with the exception that ARCM is a new device name created for the combined-function AG magnet in the Arc. Listed below are all the primary names used in the Arc and their brief description.

### I. Magnets

1. BEND : Dipole bend magnet.
2. ARCM : The combined-function Arc AG magnet.
3. KICK : Pulsed magnet.
4. QUAD : Quadrupole magnet(main winding SAM/Transiac DAC controlled)
5. QUAS : Quadrupole magnet (main winding PSC controlled).

**MASTER**  
Jscd

## II. Magnet Mover and Correctors

6. XMOV : Horizontal magnet mover.
7. YMOV : Vertical magnet mover.
8. XCOR : Horizontal steering dipole.
9. YCOR : Vertical steering dipole.

## III. Instrumentation

10. BPMX : Horizontal beam position monitor.
11. BPMY : Vertical beam position monitor
12. BPMZ : Horizontal and vertical BPM.
13. BPMS : Linac-type BPM (H&V).
14. PROF : Profile monitor.
15. WIRE : Wire profile monitor.
16. FOIL : Foil profile monitor.
17. SPEC : Spectrometer.
18. TORO : Current transformer.
19. WIGG : Wiggler magnet.

## IV. Vacuum Components

20. VACP : Vacuum pump.
21. VACV : Vacuum valve.
22. VACG : Vacuum gauge.
23. VACS : Fast vacuum sensor.

### V. Protection Devices

24. SLIT : Momentum defining slit.
25. COLL : Beam collimator.
26. STPR : Beam stopper.

### B. ZONE

The first two characters of the zone field for the Arc is CA which stands for Collider Arc. The second two digits represent the micro computer names. Over the Arc there are six micros as shown below:

1. CA11: 50Q1 to 50B1 and North Arc AGF to Achromat 6. (Inclusive).
2. CA12: North Arc Achromats 7 to 14.
3. CA13: North Arc Achromats 15 to 23.
4. CA01: South Arc AGF magnet to Achromat 7.
5. CA02: South Arc Achromats 8 to 15.
6. CA03: South Arc Achromats 16 to 23.

Figure 1. is included to illustrate the micro assignment.(2) This assignment reflects the final solution; any former assignment should be corrected to conform with this one. In addition, MC00 is reserved for special diagnostic instruments in the 3rd Achromat of south arc.

### C. UNIT NUMBER

The first two digits refer to the Achromat number. Linac-to-Arc regions are assigned as Achromat 0(zero), reverse bends are included in Achromat 8, and Instrument section is included in Achromat 3 in the South Arc. The second two digits specify approximately the location in percent of the device within that particular Achromat. In the regular Achromat the first digit of these two also represents the F-D or D-F cell number (0-9).

This seemingly awkward designation is the logical choice to satisfy the following requirements simultaneously:

1. Unit numbers sequentially follow the geometrical location of the device in the beamline.
2. No two devices have identical serial numbers unless they occupy identical  $z$  position in the beamline.
3. Leaves room for future devices.

It turns out that magnet mover and BPM associated with same ARCM are assigned a same unit number, and the fact that they are at the upstream of that ARCM is easily detected. Another convenient result is that there is no large gap of unit number at transition to the next Achromat.

For example:

1. QUAS:CA11, 001 is the formal name of 50Q1 which is a quadrupole which locates in the very beginning of the Linac-to-Arc region.

2. ARCM:CA02, 1462 is the formal name of an Arc AG magnet and locates in the South Arc Achromat number 14 and is the first magnet in the seventh F-D cell.

These conventions were arrived at after long discussions among Arc, Software, Cable plant, and Operation groups. J. Kieffer's persistence in getting the results in time for cable installation and his constant help in resolving conflicting requirements from all quarters are deeply appreciated. The authors would like to thank G. Fischer for his help in generating the component list in the special sections.
