

THE SIGNIFICANCE OF DETERMINING AIR EXCHANGE RATE IN DWELLINGS AND BUILDINGS TO CALCULATE THE INHALATION DOSE IN INDOOR AIR FROM OUTDOOR AIR CONTAMINATED WITH RADIOACTIVE MATERIAL

Karel Jílek, Josef Thomas, Boris Bulánek

State Institute of Radiation Protection, Prague

Following the first part, in this paper on a real case of escaped radioactive matter in gaseous or aerosol form the significance of known the air exchange rate for a prediction of wasted inhalation doses to population is illustrated.
