Title of the paper:			
Use Of Operational Experience Feedback For Improving The Nuclear Regulatory Framework In Romania			

The paper presents the latest developments of the nuclear safety regulatory framework in Romania, based on the use of lessons learned from operational and regulatory experience feedback. Significant improvements of the regulatory framework after the Fukushima Daiichi accident, using lessons learned from this event as well as updates of the international standards, include the issuance of a National Strategy for Nuclear Safety and Security and new regulations on: - the nuclear power plants response to transients, accidents and emergency situations;

- The protection of nuclear installations against external events of natural origin;
- The nuclear safety policy and the independent nuclear safety oversight for nuclear installations;
- The operational limits and conditions for nuclear installations.
