1 **1. Horizontal cross-sections at lower altitude:**

2

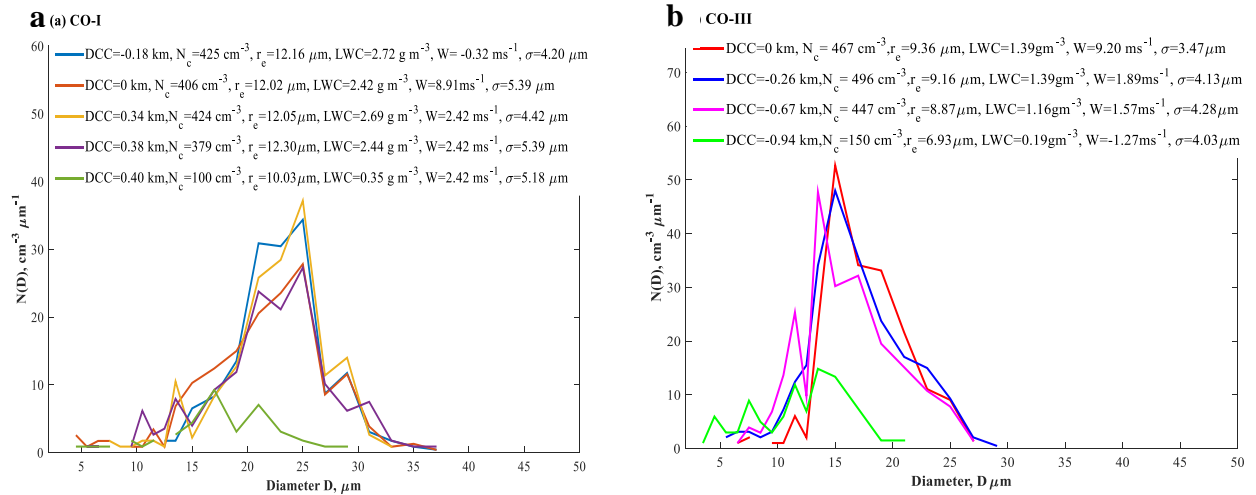

3 **Figure S1. Horizontal cross-sections at 1000 m.** Referenced in the main text at
4 the discussion about Figure 1. Horizontal cross-sections of (a) the vertical velocity
5 at an altitude of 1000 m (marked by the dashed line in 1g), the black contour marks
6 the cloud edges where $q_c > 0.01$ g/kg), (b) droplets concentration (none-cloudy
7 pixels are masked in white), (c) liquid water mixing ratio, (d) supersaturation
8 values, (e) relative dispersion, (f) effective radius, and (g) vertical cross-section
9 of the cloud's liquid mixing ratio at the center of the domain in the y-axis. The red
10 contour marks the saturated zone where $S=0$. Black arrows present the zonal and
11 vertical wind components. Black dashed line is the levels of the horizontal cross-
12 section from previous panels.

13 **2. Buoyancy driven subsiding shell:**

14 **Figure S2. Buoyancy driven subsiding shell.** Mean values of vertical wind (a),
15 absolute temperature (b), and buoyancy (c), as a function of the distance from the cloud
16 edge. (Same as Figure 2e-h in the main text). One can see that the subsiding shell,
17 presented as negative values of vertical velocity near the edge of the cloud (DFCE=0)
18 on both sides of the interface, correlates with negative buoyancy and colder
19 temperatures.

3. DSDs measured in high resolution in cumulus clouds over India:

20 **Figure S3. Examples of measured droplet size distributions.** *The DSDs were*
 21 *measured in continental cumulus clouds in high-resolution of 25 Hz by Konwar et*
 22 *al., (2021). Cloud Microphysical Structure Analysis Based on High-Resolution In*
 23 *Situ Measurements. Journal of the Atmospheric Sciences 78(7), pp.2265-85. Each*
 24 *panel is of a different aircraft penetration. (a) CO-I and (b) CO-III (see Fig. 4a and*
 25 *4c in the original paper, respectively). The distances from the cloud center (DCC),*
 26 *in cloud updrafts and weak downdrafts, droplets concentration (N_a), effective radius*
 27 *and DSD's standard deviation (σ) are given for each DSD and coded by color.*
