OWASP MEMBERSHIPS

global strategic group

Software powers the world, but insecure software threatens safety, trust, and economic growth. The Open Web Application Security Project (OWASP) is dedicated to making application security visible by empowering individuals and organizations to make informed decisions about true application security risks.

OWASP boasts 46,000+ participants, more than 65 organizational supporters, and even more academic supporters.

As a 501(c)(3) not-for-profit worldwide charitable organization, OWASP does not endorse or recommend commercial products or services. Instead, we allow our community to remain vendor neutral with the collective wisdom of the best individual minds in application security worldwide. This simple rule is the key to our success since 2001.

Your individual and corporate membership powers the organization and helps us [serve the mission](#). Please consider becoming an OWASP member today!

APPSECUSA 2016

Oct 11-14, 2016 in Washington DC, USA

OWASP's 13th Annual AppSecUSA Security Conference is the premier application security conference for developers and security experts. Come hear an amazing group of inspirational speakers—including YouTube's Favorite Hacker, Former DHS NCSA Director of Software Assurance, and Assistant Professor & Cryptographer—who are challenging traditions. You'll be inspired by fresh ideas, start rethinking the status quo, and leave ready to tackle your challenges in innovative ways.

WELCOME TO BLACK HAT EUROPE 2016

Black Hat is returning to Europe again in 2016, and we have quite an event in store. Here the brightest professionals and researchers in the industry will come together for a total of four days--two days of deeply technical hands-on Trainings, followed by two days of the latest research and vulnerability disclosures at our Briefings.

Road Map and Getting Involved

[ed

OWASP Juice Shop Tool Project [\[edit\]](#)

/ The most trustworthy online shop out there. (dschadow [↗](#))

OWASP Juice Shop is an intentionally insecure webapp for security trainings written entirely in Javascript which encompasses the entire [OWASP Top Ten](#) and other severe security flaws.

Description [\[edit\]](#)

Juice Shop is written in Node.js, Express and AngularJS. It was the first application written entirely in JavaScript listed in the [OWASP VWA Directory](#).

The application contains more than 30 challenges of varying difficulty where the user is supposed to exploit the underlying vulnerabilities. The hacking progress is tracked on a score board. Finding this score board is actually one of the (easy) challenges!

OWASP CSRFGuard [\[edit\]](#)

Welcome to the home of the OWASP CSRFGuard Project! OWASP CSRFGuard is a library that implements a variant of the [synchronizer token pattern](#) to mitigate the risk of [Cross-Site Request Forgery \(CSRF\)](#) attacks.

Introduction [\[edit\]](#)

The OWASP CSRFGuard library is integrated through the use of a JavaEE Filter and exposes various automated and manual ways to integrate per-session or pseudo-per-request tokens into HTML.

Description [\[edit\]](#)

Overview [\[edit\]](#)

OWASP CSRFGuard implements a variant of the synchronizer token pattern to mitigate the risk of CSRF

OWASP DeepViolet TLS/SSL API Project and Tools [\[edit\]](#)

DeepViolet is a TLS/SSL scanning API written in Java. To keep DeepViolet easy to use, identify bugs, reference implementations have been developed that consume the API. If you want to see what DeepViolet can do, use it from the command line in your scripts or use the graphical tool from the comfort of your desktop. Both tools can be used to scan HTTPS web servers to check server certificate trust chains, revocation status, check certificates for pending expiration, weak signing algorithms and much more.

How is DeepViolet Helpful? [\[edit\]](#)

Already great tools exist today for TLS/SSL scanning like, [Qualys Labs](#), [Mozilla Observatory](#), [OpenSSL](#). Why do I care about DeepViolet? A valid question and one I asked myself. Originally

[Review this project.](#)

The OWASP Zed Attack Proxy (ZAP) is one of the world's most popular free security tools and is actively maintained by hundreds of international volunteers*. It can help you automatically find security vulnerabilities in your web applications while you are developing and testing your applications. Its also a great tool for experienced pentesters to use for manual security testing.
