

Protect your email from Business Email Compromise and Spoofing

As a business owner, you want to make sure that your customers **only see emails you've sent yourself**. Emails are one of the easiest ways for cyber attackers to compromise the security of a company and its servers.

Authenticate your email with DMARC

DMARC has been setting the standard for email security and anti-phishing measures for years now. Still, **70-80%** of domains with a published DMARC record often **don't get DMARC enforcement**.

The thing is, unless you've setup your DMARC solution with the right policy that either rejects or quarantines un-authenticated emails, you're **not enforced!** So someone could still be using your domain to launch phishing attacks.

That's why PowerDMARC is perfect!

As DMARC specialists, we can tailor our solution to your domain. We handle everything for you:

Configuration

We take care of configuring your SPF, DKIM and DMARC records for you.

Setup

Once we setup your PowerDMARC dashboard, you'll gain visibility in no time.

Monitoring

Start your journey by monitoring your email traffic and identifying your sending sources.

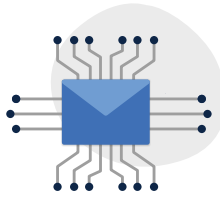

Enforcement

Achieve full DMARC enforcement (p=reject) in record time through our renowned managed services.

What makes us different?

Easily protect your entire organization from BEC, spoofing and complex phishing attacks using our platform's state of the art features

Visibility Powered by Threat Intelligence (TI)

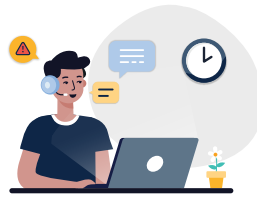

Forensics with Encryption

PowerSPF

Report IP Abuse

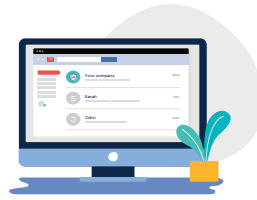

Power Take Down

Whitelabelling opportunity

Hosted MTA-STS and TLS-RPT

Hosted BIMl

Data Localization

“ Our implementation methods prevent any kind of data loss or broken emails at any scale, all this at an affordable price. ”
