

How To Stop A Ransomware Attack

If you want to stop a ransomware attack, speed matters. Sophisticated attackers often deploy a backdoor and move through your network, stealing important data before deploying ransomware.

74% OF ATTACKS GO UNDETECTED¹

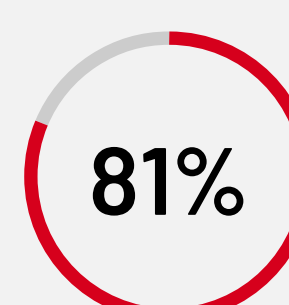

Attacks happen fast. Bad actors are nimble. Defenders need to be well-informed, practiced and swift.

Ask the right questions to help improve your detection and response

Can you be effective if you go it alone?

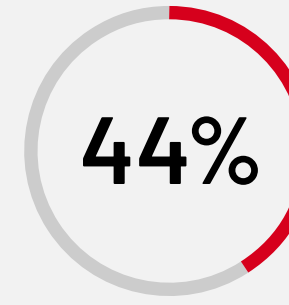

- Do you have 24/7 coverage for monitoring?
- Do you automate routine processes for consistency?
- Can your security engineering keep up with the changing landscape?
- Is your SOC battle-tested?

of security professionals rate SOC as highly complex but only 53% rate their SOC as effective²

Is your MSSP effective?

- Is your MSSP provider passing their data overload to you?
- Can you bring your existing technology?
- How do they monitor your cloud infrastructure and applications?
- Does your provider investigate and respond, or is that on you?

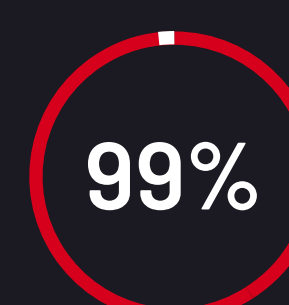

of MSSPs ignore certain types of alerts. They do NOT hire more analysts to handle volume³

Join forces with frontline experts

Managed Defense from Mandiant

- ID bad actors early with Mandiant's knowledge of critical IOCs and headline breach activity
- Find advanced adversaries first with continuous proactive hunting
- Quickly scope and contain active incidents so you don't need a full IR engagement
- Access security experts as a seamless extension of your team

of incidents resolved without incident response⁴

Elevate your detection and response capabilities

Managed Defense MDR applies human intelligence and interpretation to the complex findings from security technology to quickly surface critical incidents, uncover hidden adversaries and respond before attacks impact your business.
