

Integrate SAP Business Processes with Other Non-SAP Processes into Organized and Unified Workflows

Problem:

SAP is an industry leading solution for managing business functions across an enterprise. In today’s dynamic IT environments, the information necessary for SAP data load processes, such as Info Packages and Process Chains, can come from various external applications, databases and technologies. As a result, tight integration between SAP and non-SAP systems is necessary to ensure an accurate information flow and acceptable data quality is passed through the system. An advanced scheduling solution is necessary to achieve the proper integration of your SAP process as well as with those that are to be integrated with non-SAP systems into compound workflows that can be automated and scheduled to increase efficiency and improve on-time performance of your business and IT processes.

Solution:

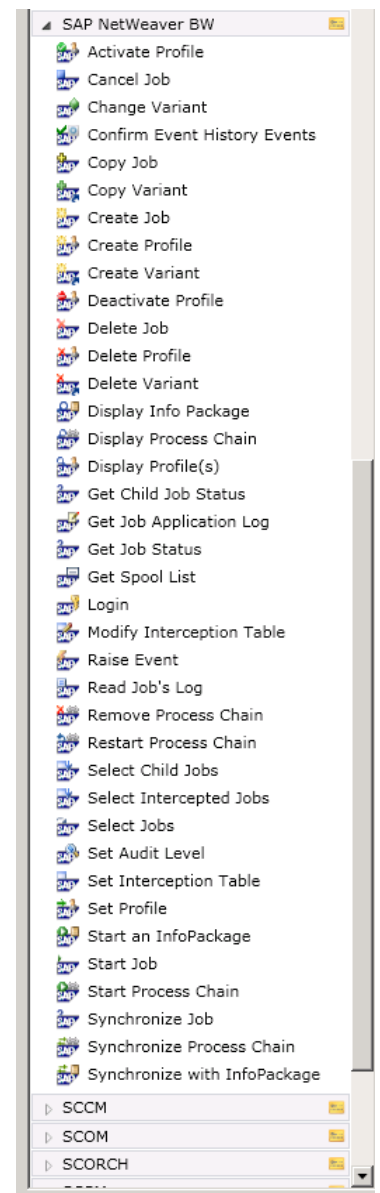

The [ActiveBatch® Extension for SAP NetWeaver BW](#) integrates SAP business processes with other SAP and non-SAP processes, including external applications, databases and technologies, into automated and repeatable workflows all without the need to install any ActiveBatch components within your SAP environment. The result is a reliable and secure operation that can leverage ActiveBatch’s scheduling capabilities to improve service levels and eliminate “idle” time for a reduced cost of operations.

The SAP Extension requires no changes to your SAP implementation or installation of ActiveBatch components within your SAP environment. The SAP extension include Job Steps for and is [certified on](#):

- **SAP BC-XBP 6.10 - Background Processing, Job Scheduling 6.10 (Version 2.0)**
- **SAP BW-SCH 3.0 - Scheduling for SAP BW 3.0**
- **SAP BC-XBP 7.0 - Background Processing and Job Scheduling 7.0 (Version 3.0)**

This allows users to schedule and support both NetWeaver and BW-SCH processes from within ActiveBatch, including the ability to schedule, run and monitor ABAP processes as well as Process Chains and then use their completion status as a trigger to start another job within your workflow.

**SAP NetWeaver BW
ActiveBatch Version 8 and above**

ActiveBatch Extension for SAP® NetWeaver® BW

The [ActiveBatch Integrated Jobs Library](#) offers over 100 templated drag-and-drop Job Steps for creating custom workflows that integrate business processes including SQL Server, Oracle, Crystal Reports, File Transfers (FTP, SFTP, FTPS), Web Services and more, all without the need for custom scripting. ActiveBatch goes further by using constraints, event triggers, monitoring, alerts, audits and more for improved control over all workflows. In addition, ActiveBatch supports SAP BusinessObjects Data Services creating a single, centralized viewpoint for the integration and management of all your SAP and non-SAP jobs.

Benefits:

- **Reliable integration of SAP and non-SAP systems into organized workflows without the need for custom script creation**
- **Improve service levels with automation and scheduling capabilities and eliminate idle time for a reduced cost of operations**
- **Improved management of business and IT processes and increased visibility into workflows through a single, centralized viewpoint**

Partnership:

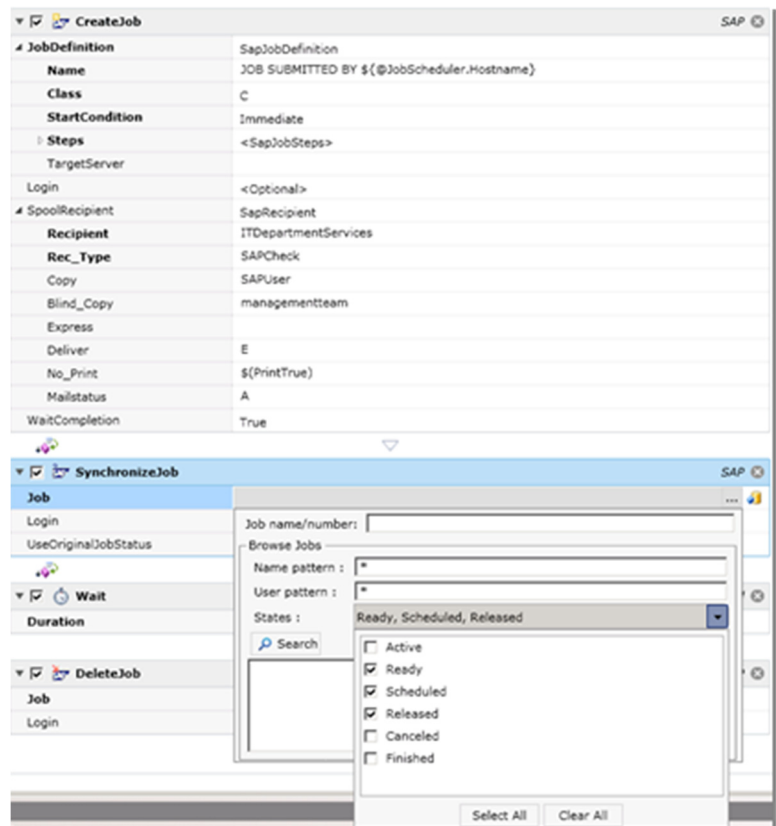

Advanced Systems Concepts, Inc. is a SAP Partner. ActiveBatch allows SAP users to easily build mixed workloads across systems that integrate SAP with other databases, applications, and technologies for improved business process automation. SAP users who require advanced scheduling capabilities can benefit from ActiveBatch by better managing and controlling workloads and tasks across disparate systems.

About SAP:

As the world's leading provider of business software solutions, SAP pursues a commitment to innovation that delivers sustainable business value for our customers and shareholders, and sets the foundation for a strong, stable company positioned for long-term growth.
