

SMBP Coverage Insights: Medicaid

October 2024 (based on data available 2/15/24)

Self-measured blood pressure (SMBP) is an evidence-based strategy that can improve blood pressure control for individuals with hypertension. SMBP is most effective when an individual has access to a validated blood pressure device for home use coupled with ongoing clinical support. Refer to the [US Blood Pressure Validated Device Listing \(VDL™\)](#) for a list of validated devices.

The chart below shows the status of coverage by state for 1) SMBP clinical services and 2) automated blood pressure devices and standalone cuff. It is intended to highlight which states offer provider reimbursement to perform SMBP services and allow Medicaid patients to obtain an automated blood pressure device.

CPT® and HCPCS Code Description

99473	SMBP using a device validated for clinical accuracy and patient education/training and device calibration
99474	Separate self-measurements, collection of daily reports by the patient or caregiver to the healthcare provider, communication of BP readings and treatment plans
A4670	Automated blood pressure device
A4663	Blood pressure cuff only
