

The Experience 2020 Report: Digital Employee Experience today

SURVEY CONDUCTED BY VANSON BOURNE

Introduction

By Jon Cairns, VP, Global Solution Consulting at Nextthink

Modern businesses understand how quickly a tactical technology issue can become a significant strategic risk. From the data center to your endpoints, IT represents the nervous system for any enterprise, and every employee depends on it to be productive. The growth of remote working makes these facts even more significant.

Consequently, Digital Employee Experience (DEX) impacts everything from productivity, retention, and customer satisfaction, to your bottom line. Today, the most forward-thinking organizations understand what it really means to manage their DEX. They have real visibility into their employee computing problems and can resolve those issues at scale.

However, many organizations are just beginning their journey. That is why Nextthink commissioned this independent survey from Vanson Bourne of 1,000 senior IT leaders and 2,000 employees (non-IT), to help share insight into the issues faced by most employees today.

We hope you find this research useful, whichever stage of the DEX journey you're on.

Table of contents

Data highlights	3
Employees, IT and productivity	4 - 6
Innovation and visibility	7 - 9
Business benefits and costs	10 - 12
About the survey	13

Data highlights

Employees are expecting improvements: 82% of employees would like to see more done by their organizations to improve DEX

Inability to measure new IT rollouts: On average, IT departments only have 56% visibility into the state of new technology rollouts, and only 45% visibility into the issues impacting employee experience

IT issues at work are commonplace: 61% of respondents agree that IT downtime is an accepted norm in their organization

Employees, IT and productivity

Vanson Bourne surveyed significant sample sizes of both employees and senior IT leaders. By contrasting and combining their answers, you can start to piece together what the real cost of poor Digital Employee Experience is, both on individual productivity, and the wider organization's bottom line.

Incidents reported

55%

Employee respondents admit they report only around half of their technology issues to the IT department on average

IT contacted

66%

Percentage of respondents that have ever contacted IT about any IT/technology issue

Employees impacted

79%

The majority of our respondents agreed, however, that when IT issues are not reported, it always leads to bigger problems

WATCH VIDEO

“How did you measure experience ten years ago? You could spend half an hour at the coffee machine and find someone that will explain the problem they have with their device. Today it's different.”

Cedric Le Coguic

Group IT Technical Project Manager, MCI Group

Duration of technology issues

The **average number of minutes** senior IT leaders report that **IT/technology issues prevent** their organization's employees from doing their job.

The **average number of minutes** employees report that their **IT/technology issues** last.

Frequency of technology issues

Average frequency of technology issues, per employee, according to IT respondents

If only 55% of tech issues are reported to IT, however, the real frequency could be twice as bad

Barriers to productivity impact business performance:

- IT told Vanson Bourne that an employee suffers on average around 100 IT/technology interruptions a year
- If IT is correct then, with each interruption lasting 28 minutes, this adds up to almost 50 hours of lost productivity per employee per year
- With employees reporting just over half of incidents (55%), however, the real productivity drain could be almost twice as bad as IT estimates
- For a company of 10,000 employees, this equates to costs of \$500,000 per week and \$25 million per year

“

This data proves the strategic cost of poor Digital Employee Experience (DEX). When you multiply the interruptions by the number of employees you see that it's a huge productivity loss. And it's not just in terms of bottom line, it's also in terms of employee satisfaction. Many of these users will be wondering if they could have a better experience in another company.

Jon Cairns

VP, Global Solution Consulting at Nextthink

Innovation and visibility

Though modern enterprises focus on innovation, the reality is that they struggle to deliver smooth technology rollouts for their employees. IT departments and employees also experience these technology rollouts differently—and their contrasting perceptions reinforce the narrative that there is often a void between both camps.

Visibility of success

56% The average level of visibility IT has into the success of new technology rollouts

Visibility of uptake

58% The average level of visibility IT has into the adoption of new technology

Visibility of issues

45% The average level of visibility IT has into issues with new technology

WATCH VIDEO 

“We know there’s going to be changes in our environment. But how can we manage those changes, control those changes, and drive the right technologies to help people consume those technologies with a frictionless experience?”

Bhavin Shah

Application Service Desk
Manager, Johnson & Johnson

Divergent perspectives on innovation

A majority of our IT respondents thought innovation activities at their organization had been mostly (60%) or totally successful (4%)

The experience of our employee respondents was different. **Totally successful innovation activities** were similarly low (2%), but mostly successful responses (39%) were **much lower**.

Across all of our respondents, there was agreement that improvement was required in the introduction of new technologies (88%) and innovation (85%)

Q: “How much improvement do you believe is required from your organization’s IT department in the following areas?” [employees and IT]

Introducing new technologies

Innovating the way we work

Transformation challenges for employees and IT

Five most common difficulties suffered by employees during recent technology rollout (last 12-24 months)

Five most common difficulties suffered by senior IT leaders during recent technology rollout (last 12-24 months)

“

IT tends to have great visibility into their network, the applications, the server, the data center – but when a user is calling the helpdesk to report an issue, IT doesn't have visibility into how the user is experiencing this issue. There are often other factors around the employee that can make the experience poor, and that's the visibility that many organizations are missing.

Jon Cairns

VP, Global Solution Consulting at Nextthink

Business benefits and costs

Vanson Bourne sought to gauge the current standing of Digital Employee Experience (DEX) within the enterprise, and its relation to employee experience more generally. How seriously is DEX being treated by employers, and what can be done to improve the overall picture? The results tell an interesting story.

Estimated satisfaction

Real satisfaction

Low expectations

“It’s very important for us to get to the sustainable aspect. How to make sure we get to a condition, and then go on to the next improvement and then the next improvement and always improve.”

Arnaud Pire
Senior Manager IT, Toyota Motor Europe

Is Digital Employee Experience the weak link in employee experience?

The proportion of employees who believe that IT/technology downtime is an accepted norm in their organization.

There was a strong will to see improvements in DEX in these employee respondents, with 82% telling us their employers should do more in this area.

Driving employee experience with Digital Employee Experience:

- IT estimates that 25% of their users are 'completely satisfied'. The reality, however, is that employee respondents report a lower satisfaction rate than this (17%)
- For employee experience overall – the total experience received at work – the average is higher, with 32% of respondents reporting that they are 'completely satisfied'
- With 61% telling us IT downtime is an accepted norm at their organization, no wonder 82% of employees would like to see more done by employers to improve Digital Employee Experience

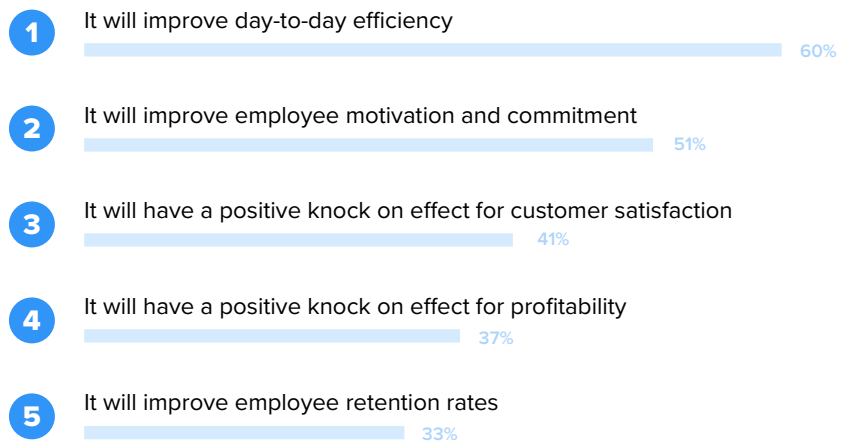

Digital Employee Experience: risks and benefits

Five biggest impacts of poor Digital Employee Experience [employees]

Five biggest benefits of improved Digital Employee Experience [employees]

“

Digital Employee Experience is an enormously important part of employee experience. Many people are looking at their companies through the window of their devices, through applications. So, with the growth of the remote working, many employees will have all their interactions with their companies through digital applications.
