

Ericom® Solutions for Instant Application Webification

The Faster Way to Web-Enable legacy Windows Applications

Harness the Power of the Web Browser to Deliver Real Value to Customers

Today's employees work from multiple locations; the corporate office, home-office and on-the-go. They use multiple devices, and store data on clouds. Businesses are increasingly providing employees with mobile or web-based applications that can support the needs of the mobile workforce.

For software and hosting service providers looking to jumpstart their application sales, Ericom's high-performance HTML5 access technology rapidly transforms Windows and legacy applications into web-based and cloud-ready software for resale or hosting.

Ericom empowers software and hosting service providers to instantly enhance usage and delivery of their offerings and enjoy new revenue streams, while expanding their business and portfolio.

"Ericom's HTML5 browser-based access has proven a very natural experience for end-users, ensuring a remarkably rapid take-up of services."

Dave Curran
IT Manager, ITB

Save on IT costs and R&D efforts required to convert old applications to current work environments

Easily turn legacy applications into web-based applications –in hours

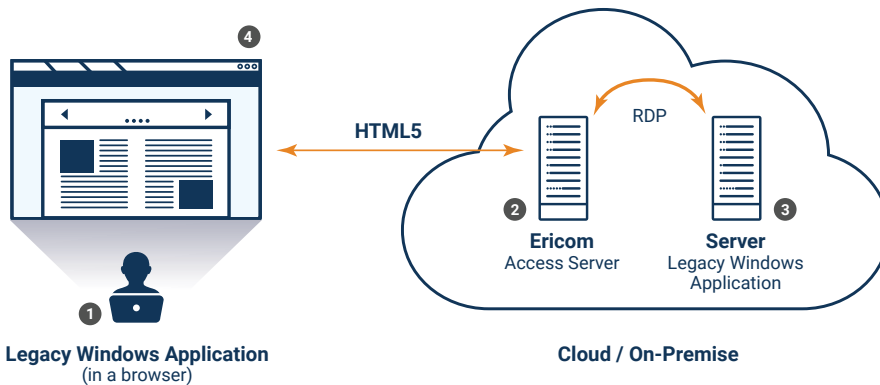

Enable business continuity without compromising on application performance, security and user experience

Try the Demo Now! www.ericom.com/Demo_AccessNow

Features

- **Shorter deployment time** – Deliver a full web-based / SaaS offering without the need to redevelop and port your existing software, dramatically reducing complexity and lead time
- **Supports any platform & OS** – Meet customer demands to extend your application to a wider range of devices, including PCs, tablets and smartphones
- **Complete control** – Applications run on the IT infrastructure of your choice, ensuring an optimal fit for web-based and SaaS-specific requirements
- **Allows ISVs to focus on smaller upgrades** vs. monster patch rollouts
- **Central management & reporting (optional)** – Easily host and manage multiple customer environments using a single, hyper-scalable management console

Value to your Development Team, Business and Customers

- **Free up development resources**
Focus on enhancing your application and meeting customer requirements rather than the delivery mechanism. Effortlessly stay up-to-date with the latest browser and OS versions
- **Empower customers with on-demand, web access**
Pure HTML5 access technology eliminates the need for client-side installation and configuration of software, plugins or add-ons –perfect for mobile workforce and BYOD initiatives
- **Generate new & additional revenue**
Drive additional license sales and win new business with an easy to use offering that runs on any device

Ericom's Web-First Approach

Ericom developed its HTML5 access solution several years ago with the clear notion that browser-based access is the best strategy for the evolving mobile workforce. Focus on your core products and services – and leave the web-enablement to Ericom.

About Ericom Software www.ericom.com

Ericom Software provides businesses with secure access to the web and corporate applications, in the cloud and on-premises, from any device or location. Leveraging innovative isolation capabilities and multiple secure access technologies, Ericom's solutions ensure that devices and applications are protected from cybersecurity threats, and users can connect to only the specific resources they are authorized to access.
