RECOMMENDED CITATION

Pew Research Center, January, 2024, "Americans' Social Media Use"

About Pew Research Center

Pew Research Center is a nonpartisan, nonadvocacy fact tank that informs the public about the issues, attitudes and trends shaping the world. It does not take policy positions. The Center conducts public opinion polling, demographic research, computational social science research and other data-driven research. It studies politics and policy; news habits and media; the internet and technology; religion; race and ethnicity; international affairs; social, demographic and economic trends; science; research methodology and data science; and immigration and migration. Pew Research Center is a subsidiary of The Pew Charitable Trusts, its primary funder.

© Pew Research Center 2024

How we did this

To better understand Americans' social media use, Pew Research Center surveyed 5,733 U.S. adults from May 19 to Sept. 5, 2023. Ipsos conducted this National Public Opinion Reference Survey (NPORS) for the Center using address-based sampling and a multimode protocol that included both web and mail. This way nearly all U.S. adults have a chance of selection. The survey is weighted to be representative of the U.S. adult population by gender, race and ethnicity, education and other categories.

Polls from 2000 to 2021 were conducted via phone. For more on this mode shift, [read our Q&A](#).

Here are the [questions used for this analysis](#), along with responses, and [its methodology](#).

A note on terminology: Our May-September 2023 survey was already in the field when Twitter changed its name to “X.” The terms **Twitter** and **X** are both used in this report to refer to the same platform.

Americans' Social Media Use

YouTube and Facebook are by far the most used online platforms among U.S. adults; TikTok's user base has grown since 2021

Social media platforms faced a range of controversies in recent years, including [concerns over misinformation](#) and [data privacy](#). Even so, U.S. adults use a wide range of sites and apps, especially YouTube and Facebook. And TikTok – which [some Congress members previously called to ban](#) – saw growth in its user base.

These findings come from a Pew Research Center survey of 5,733 U.S. adults conducted May 19-Sept. 5, 2023.

Which social media sites do Americans use most?

YouTube by and large is the most widely used online platform measured in our survey. Roughly eight-in-ten U.S. adults (83%) report ever using the video-based platform.

While a somewhat lower share reports using it, **Facebook is also a dominant player in the online landscape.** Most Americans (68%) report using the social media platform.

Additionally, **roughly half of U.S. adults (47%) say they use Instagram.**

The **other sites and apps asked about are not as widely used**, but a fair portion of Americans still use them:

- 27% to 35% of U.S. adults use Pinterest, TikTok, LinkedIn, WhatsApp and Snapchat.
- About one-in-five say they use Twitter (recently renamed “X”) and Reddit.

Most U.S. adults use YouTube and Facebook; about half use Instagram

% of U.S. adults who say they *ever* use ...

Note: Respondents who did not give an answer are not shown.
Source: Survey of U.S. adults conducted May 19-Sept. 5, 2023.
“Americans’ Social Media Use”

PEW RESEARCH CENTER

This year is the first time we asked about BeReal, a [photo-based platform launched](#) in 2020. Just 3% of U.S. adults report using it.

Recent Center findings show that [YouTube also dominates the social media landscape among U.S. teens](#).

TikTok sees growth since 2021

One platform – TikTok – stands out for growth of its user base. A third of U.S. adults (33%) say they use the video-based platform, up 12 percentage points from 2021 (21%).

The other sites asked about had more modest or no growth over the past couple of years. For instance, while YouTube and Facebook dominate the social media landscape, the shares of adults who use these platforms has remained stable since 2021.

The Center has been tracking use of online platforms for many years. Recently, we shifted from gathering responses via telephone to the web and mail. [Mode changes can affect study results](#) in a number of ways, therefore we have to take a cautious approach when examining how things have – or have not – changed since our last study on these topics in 2021. For more details on this shift, [please read our Q&A](#).

A third of U.S. adults say they use TikTok, up from 21% in 2021

% of U.S. adults who say they *ever* use ...

Note: Dotted line indicates a change in mode. Polls from 2000-2021 were conducted via phone. In 2023, the poll was conducted via web and mail. Refer to the topline for more information on how question wording varied over the years. Pre-2018 data is not available for YouTube, Snapchat or WhatsApp; pre-2019 data is not available for Reddit; pre-2021 data is not available for TikTok; pre-2023 data is not available for BeReal. Respondents who did not give an answer are not shown.

PEW RESEARCH CENTER

Stark age differences in who uses each app or site

Adults under 30 are far more likely than their older counterparts to use many of the online platforms. These findings are [consistent with previous Center data](#).

Age gaps are especially large for Instagram, Snapchat and TikTok – platforms that are used by majorities of adults under 30. For example:

- 78% of 18- to 29-year-olds say they use Instagram, far higher than the share among those 65 and older (15%).
- 65% of U.S. adults under 30 report using Snapchat, compared with just 4% of the oldest age cohort.
- 62% of 18- to 29-year-olds say they use TikTok, much higher than the share among adults ages 65 years and older (10%).
- Americans ages 30 to 49 and 50 to 64 fall somewhere in between for all three platforms.

YouTube and Facebook are the only two platforms that majorities of all age groups use. That said, there is still a large

The youngest U.S. adults are far more likely to use Instagram, Snapchat and TikTok; age differences are less pronounced for Facebook

% of U.S. adults who say they *ever* use ...

Note: All differences shown in DIFF column are statistically significant. The DIFF values shown are based on subtracting the rounded values in the chart. Respondents who did not give an answer are not shown.

Source: Survey of U.S. adults conducted May 19-Sept. 5, 2023.

"Americans' Social Media Use"

PEW RESEARCH CENTER

age gap between the youngest and oldest adults when it comes to use of YouTube. The age gap for Facebook, though, is much smaller.

Americans ages 30 to 49 stand out for using three of the platforms – LinkedIn, WhatsApp and Facebook – at higher rates. For instance, 40% of this age group uses LinkedIn, higher than the roughly three-in-ten among those ages 18 to 29 and 50 to 64. And just 12% of those 65 and older say the same.

Overall, a large majority of the youngest adults use multiple sites and apps. About three-quarters of adults under 30 (74%) use at least five of the platforms asked about. This is far higher than the shares of those ages 30 to 49 (53%), 50 to 64 (30%), and ages 65 and older (8%) who say the same.

Refer to our [social media fact sheet](#) for more detailed data by age for each site and app.

Other demographic differences in use of online platforms

A number of demographic differences emerge in who uses each platform. Some of these include the following:

Instagram

- **Race and ethnicity:** Roughly six-in-ten Hispanic (58%) and Asian (57%) adults report using Instagram, somewhat higher than the shares among Black (46%) and White (43%) adults.¹
- **Gender:** Women are more likely than their male counterparts to say they use the platform.
- **Education:** Those with some college education and those with a college degree report using it at somewhat higher rates than those who have a high school degree or less education.

TikTok

- **Race and ethnicity:** Hispanic adults are particularly likely to use TikTok, with 49% saying they use it, higher than Black adults (39%). Even smaller shares of Asian (29%) and White (28%) adults say the same.
- **Gender:** Women use the platform at higher rates than men (40% vs. 25%).

LinkedIn

- **Education:** Americans with higher levels of formal education are especially likely to use LinkedIn. For instance, 53% of Americans with at least a bachelor's degree report using the platform, far higher than among those who have some college education (28%) and those who have a high school degree or less education (10%). This is the largest educational difference measured across any of the platforms asked about.

Twitter (renamed "X")

- **Household income:** Adults with higher household incomes use Twitter at somewhat higher rates. For instance, 29% of U.S. adults who have an annual household income of at least \$100,000 say they use the platform. This compares with one-in-five among those with annual household incomes of \$70,000 to \$99,999, and around one-in-five among those with annual incomes of less than \$30,000 and those between \$30,000 and \$69,999.

¹ Estimates for Asian adults are representative of English speakers only.

Pinterest

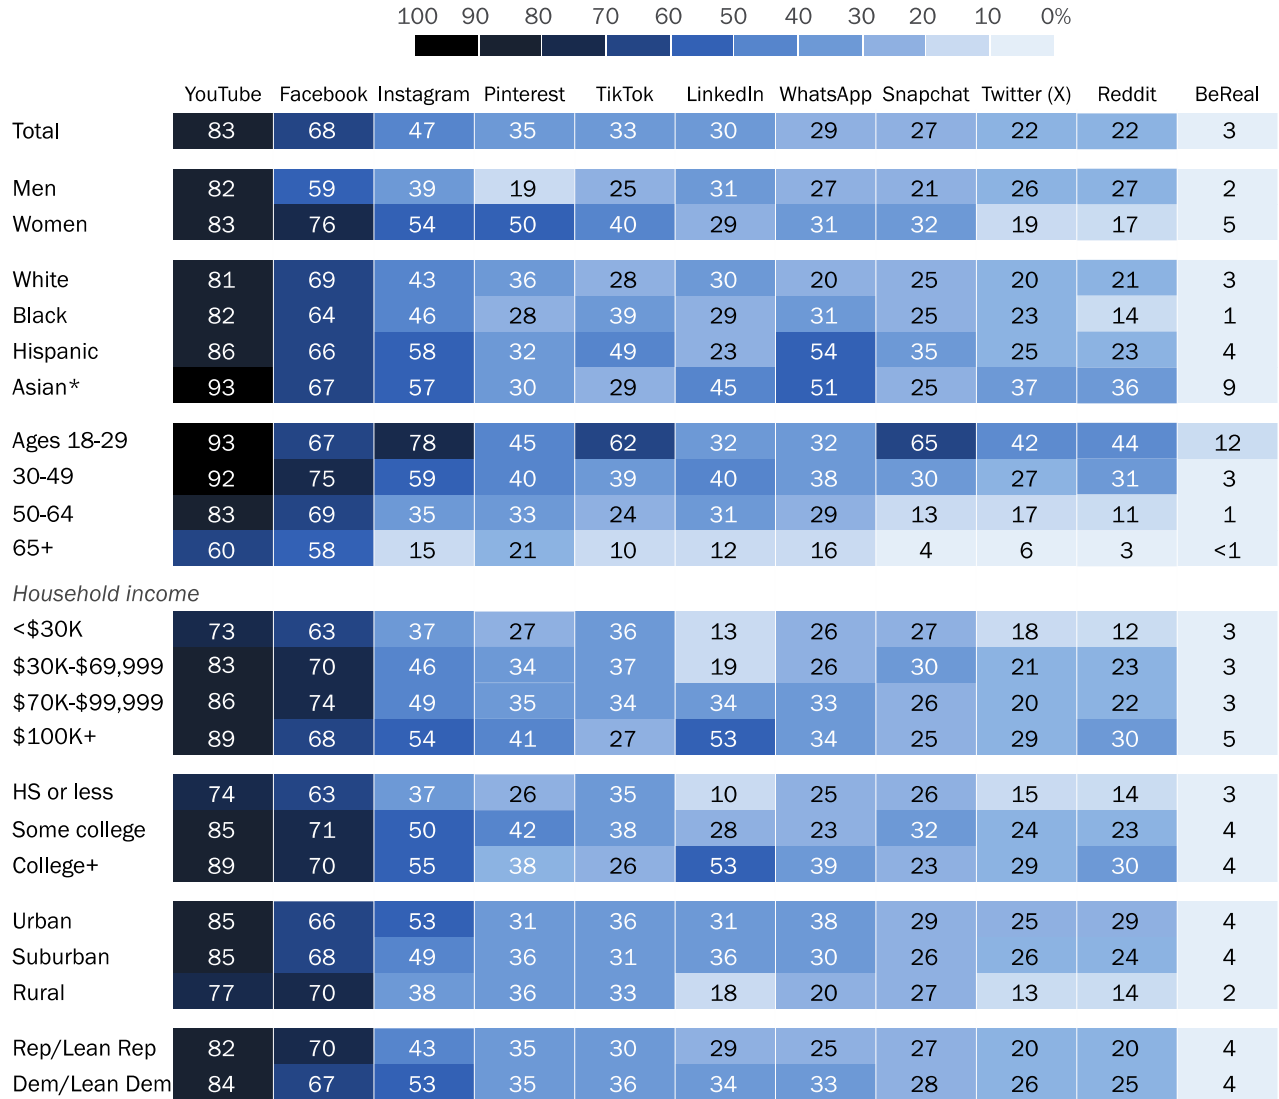

- **Gender:** Women are far more likely to use Pinterest than men (50% vs. 19%).

WhatsApp

- **Race and ethnicity:** 54% of Hispanic adults and 51% of Asian adults report using WhatsApp. This compares with 31% of Black adults and even smaller shares of those who are White (20%).

How use of online platforms – such as Facebook, Instagram or TikTok – differs among some U.S. demographic groups

% of U.S. adults who say they *ever* use ...

* Estimates for Asian adults are representative of English speakers only.

Note: White, Black and Asian adults include those who report being only one race and are not Hispanic. Hispanic adults are of any race. Not all numerical differences between groups shown are statistically significant. Respondents who did not give an answer are not shown.

2023 National Public Opinion Reference Survey (NPORS)

Methodology

Summary

Ipsos conducted the National Public Opinion Reference Survey (NPORS) for Pew Research Center using address-based sampling and a multimode protocol. The survey was fielded from May 19 to Sept. 5, 2023. Participants were first mailed an invitation to complete an online survey. A paper survey was later mailed to those who did not respond. In total, 2,217 respondents completed the survey online, and 3,516 respondents completed the paper survey (total n=5,733). The survey was administered in English and Spanish. The AAPOR Response Rate 1 was 31%.

Sample definition

The sample was drawn from the U.S. Postal Service Computerized Delivery Sequence File and was provided by MSG (Marketing Systems Group). Occupied residential addresses (including “drop points”) in all U.S. states (including Alaska and Hawaii) and the District of Columbia had a nonzero chance of selection. The draw was a national, stratified random sample, with differential probabilities of selection across the mutually exclusive strata. Ipsos designed the sample plan as shown in the table below.

Stratum	Race/Ethnicity	% of specified race/ethnicity	Education	Total ABS households	Total sampled households
1	Black, non-Hispanic	50%-74.99% Black, non-Hispanic	65%+ HS or less	0.5%	0.6%
2	Black, non-Hispanic	50%-74.99% Black, non-Hispanic	Remaining census block groups	3.3%	4.0%
3	Black, non-Hispanic	75%+ Black, non-Hispanic	65%+ HS or less	0.4%	0.6%
4	Black, non-Hispanic	75%+ Black, non-Hispanic	Remaining census block groups	2.4%	3.1%
5	Hispanic	50%-74.99% Hispanic	65%+ HS or less	1.2%	5.6%
6	Hispanic	50%-74.99% Hispanic	Remaining census block groups	4.7%	12.4%
7	Hispanic	75%+ Hispanic	65%+ HS or less	2.0%	5.8%
8	Hispanic	75%+ Hispanic	Remaining census block groups	1.8%	3.9%
9	All other	Remaining census block groups	65%+ HS or less	3.0%	4.5%
10	All other	Remaining census block groups	Remaining census block groups	80.8%	<u>59.3%</u>
					100%

Mailing protocol

Ipsos sent initial mailings in a 9-by-12-inch envelope via first-class mail to the 19,498 sampled households. These packets included two \$1 bills and a letter asking a member of the household to complete an online survey using the website and password provided. If two or more adults were in the household, the letter asked the adult with the next birthday to complete the survey. Sampled households were later sent a reminder postcard and then a reminder letter via first-class mail.

Ipsos sent nonresponding households with a deliverable address a 9-by-12-inch Priority Mail envelope. The Priority envelope contained a letter, a \$5 bill, a paper version of the survey and a postage-paid return envelope. The paper survey was one 11-by-17-inch page folded booklet-style. The within-household selection instructions were identical to those used in the earlier online survey request. Nonresponding households were later sent a second envelope containing another copy of the paper questionnaire by first-class mail.

The initial mailing and the first mailing containing the paper version of the survey were each sent out in two separate launches: soft launch and full launch. The soft launch made up 5% of the sample at each point in the field period and was sent out several days earlier than the full launch. The full launch consisted of the remaining sample.

Households in Hispanic-dominant census block groups received all materials in English and Spanish. All other households received materials in English only. Those who completed the survey online or returned the completed paper survey were sent a \$10 post-incentive.

Questionnaire development and testing

Pew Research Center developed the questionnaire in consultation with Ipsos. The online questionnaire was tested on both desktop and mobile devices. The test data was analyzed to ensure the logic and randomizations were working as intended before the survey was launched.

Weighting

The survey was weighted to support reliable inference from the sample to the target population of U.S. adults. The weight was created using a multistep process that includes a base weight adjusting for differential probabilities of selection and a raking calibration that aligns the survey with the population benchmarks. The process starts with the base weight, which accounted for the probability of selection of the address from the U.S. Postal Service Computerized Delivery Sequence File frame, as well as the number of adults living in the household.

Then the base weights are calibrated to population benchmarks using raking, or iterative proportional fitting. The raking dimensions and the source for the population parameter estimates are reported in the table below. All raking targets are based on the noninstitutionalized U.S. adult population (ages 18 and older). These weights are trimmed at about the 1st and 99th percentiles to reduce the loss in precision stemming from variance in the weights.

Raking dimensions and source for population parameter estimates, NPORS 2023

Raking dimension*	Source
Age(5)	2021 American Community Survey
Gender(2) x Age(3)	2021 American Community Survey
Gender(2) x Education(3)	2021 American Community Survey
Age(3) x Education(3)	2021 American Community Survey
Race/ethnicity(5)**	2021 American Community Survey
Education(3) x Race/ethnicity(4)***	2021 American Community Survey
Race/ethnicity(4) x Born inside or outside the U.S.(2)***	2021 American Community Survey
Census region(4) by metro status(2)	2021 Current Population Survey ASEC March Supplement
Voter registration(2)*	2018 Current Population Survey Voting and Registration Supplement
Phone type(3) x Education(3)****	2022 National Health Interview Survey
Phone type(3) x White/non-White(2)****	2022 National Health Interview Survey
Phone type(3) x Age(3)	2022 National Health Interview Survey

* Voter registration is calculated using procedures from Hur, Achen (2013) and rescaled to include the total U.S. adult population.

** The standalone raking dimension for race/ethnicity includes “Asian, non-Hispanic” as its own category, but this category is combined with “Other, non-Hispanic” when crossed with other dimensions.

*** Education is collapsed for the “Other, non-Hispanic” category. Born inside or outside the U.S. is crossed only among Hispanics.

**** Cellphone only, landline only or both.

Design effect and margin of error

Weighting and survey design features that depart from simple random sampling tend to result in an increase in the variance of survey estimates. This increase, known as the design effect, or “deff,” should be incorporated into the margin of error, standard errors and tests of statistical significance. The overall design effect for a survey is commonly approximated as 1 plus the squared coefficient of variation of the weights.

For this survey, the margin of error (half-width of the 95% confidence interval) incorporating the design effect for full sample estimates at 50% is plus or minus 1.8 percentage points. Estimates based on subgroups will have larger margins of error. It is important to remember that random sampling error is only one possible source of error in a survey estimate. Other sources, such as question wording and reporting inaccuracy, may contribute additional error.

A summary of the weights and their associated design effect is reported in the table below.

Weight variable	Completed interviews	Approximate design effect	Effective sample size	Margin of error (95% confidence level)
WEIGHT	5,733	1.9	2,980	±1.8 percentage points

The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the 95% level of confidence for different groups in the survey.

Sample sizes and margins of error, NPORS 2023

Group	Unweighted sample size	Plus or minus ...
Total sample	5,733	1.8 percentage points
White, non-Hispanic	3,729	2.2 percentage points
Black, non-Hispanic	528	5.7 percentage points
Hispanic	941	4.8 percentage points
Asian, non-Hispanic	244	8.5 percentage points
Ages 18-29	546	5.3 percentage points
30-49	1,589	3.3 percentage points
50-64	1,591	3.3 percentage points
65+	1,914	2.8 percentage points
High school or less	1,344	3.5 percentage points
Some college	1,873	3.2 percentage points
College grad+	2,466	2.5 percentage points
<i>Household income</i>		
<\$30K	1,068	4.3 percentage points
\$30K-\$69,999	1,777	3.4 percentage points
\$70K-\$99,999	894	4.5 percentage points
\$100K+	1,712	3.1 percentage points
Urban	1,487	3.7 percentage points
Suburban	2,718	2.6 percentage points
Rural	1,449	3.5 percentage points

PEW RESEARCH CENTER

Sample sizes and sampling errors for other subgroups are available upon request. In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

A note about the Asian adult sample

This survey includes a total sample size of 325 Asian adults. The sample primarily includes English-speaking Asian adults and, therefore, may not be representative of the overall Asian adult population. Despite this limitation, it is important to report the views of Asian adults on the topics in this study. As always, Asian adults' responses are incorporated into the general population figures throughout this report.

Dispositions

The table below reports the disposition of all sampled households for the survey.

Final dispositions and rates, NPORS 2023

Interview	Code	Cases
Complete	1.10	5,733
Partial	1.20	89
Eligible, non-interview		
Refusal	2.11	21
Blank questionnaire returned	2.1131	51
Completed questionnaire, but not returned during field period	2.27	82
Unknown eligibility, non-interview		
Nothing returned or completed	3.199	12,246
Housing unit, unknown if eligible respondent	3.20	37
Not eligible		
Selected respondent screened out of sample	4.10	7
No such address	4.313	1,232

² The definition of an internet user varies from survey to survey. Prior to January 2005, internet users were defined as those who said “yes” to “Do you ever go online to access the Internet or World Wide Web or to send and receive email?” From January 2005 through February 2012, an internet user is someone who said “yes” to either “Do you use the internet, at least occasionally?” (INTUSE) OR “Do you send or receive email, at least occasionally?” (EMLOCC). From April 2012 through December 2012, an internet user is someone said “yes” to any of three questions: INTUSE, EMLOCC or “Do you access the internet on a cell phone, tablet or other mobile handheld device, at least occasionally?” (INTMOB). In May 2013, half the sample was asked INTUSE/EMLOCC/INTMOB and half was asked EMINUSE/INTMOB. Those May 2013 trend results are for both forms combined. Since then, anyone who responds “yes” to EMINUSE or INTMOB is considered an internet user. The surveys with an asterisk (*) originally included 16- and 17-year-olds in their samples, while all other surveys were exclusively conducted among adults ages 18 and older. In some prior Pew Research Center publications, findings from the asterisked surveys included those under 18. In this table, results have been recalculated to only include adults ages 18 and older on all surveys to enable comparisons.

⁸ Home broadband users are defined as those who said they have high-speed broadband. Those defined as not having home broadband gave any other answer, including not sure or refusing the question.

⁹ Home broadband users are defined as those who said they have high-speed broadband. Those defined as not having home broadband gave any other answer, including not sure or refusing the question.

¹⁰ The company changed its name to X while our May 19-Sept. 5, 2023, survey was in the field.

¹¹ Wording in January 2021 was "Please tell me if you ever use any of the following. Do you ever use... [INSERT ITEMS; RANDOMIZE ITEM-S a-e FIRST AS A BLOCK, THEN RANDOMIZE ITEMS f-k AS A BLOCK]?" Wording in February 2019 was "Please tell me if you ever use any of the following social media sites. Do you ever use... [INSERT ITEMS; RANDOMIZE]?" For January 2018, it was "Please tell me if you ever use any of the following social media sites online or on your cell phone. Do you ever use... [INSERT ITEMS; RANDOMIZE]?" May 2013 wording was "Do you ever use the internet to... [INSERT ITEM; RANDOMIZE]?" For August and December 2012, as well as September 2013 through September 2014, the wording was "Please tell me if you ever use the internet to do any of the following things. Do you ever... [INSERT ITEM; RANDOMIZE]?" For April 2015 through April 2016, the question wording was "Please tell me if you ever use the internet or a mobile app to do any of the following things. Do you ever use the internet or a mobile app to... [INSERT ITEM; RANDOMIZE]?" The surveys with an asterisk (*) originally included 16- and 17-year-olds in their samples, while all other surveys were exclusively conducted among adults ages 18 and older. In some prior Pew Research Center publications, findings from the asterisked surveys included those under 18. In this table, results have been recalculated to only include adults ages 18 and older on all surveys to enable comparisons.

¹² Dec. 13-16, 2012, trend was asked of all internet users as a standalone question: "Do you ever use Facebook?"

	<u>Yes, use this</u>	<u>No, don't use this</u>	<u>(VOL.) Don't know</u>	<u>(VOL.) No answer</u>

¹³ This question was asked of landline sample only. Results shown here have been recalculated to include cell phone sample in the "Yes" percentage. Beginning September 2007, the question/item was not asked of the cell phone sample, but trend results shown here reflect Total combined landline and cell phone sample. In past polls, the question was sometimes asked as an independent question and sometimes as an item in a series. Wording may vary from survey to survey. Wording variations include: "Do you have a cell phone or a Blackberry or iPhone or other device that is also a cell phone?"; "Do you have...a cell phone or a Blackberry or iPhone or other handheld device that is also a cell phone?"; "Do you have a cell phone, or a Blackberry or other device that is also a cell phone?"; "Do you happen to have a cell phone?"; "Do you have a cell phone?"; "Next, do you have a cell phone, or not?" The surveys with an asterisk (*) originally included 16- and 17-year-olds in their samples, while all other surveys were exclusively conducted among adults ages 18 and older. In some prior Pew Research Center publications, findings from the asterisked surveys included those under 18. In this table, results have been recalculated to only include adults ages 18 and older on all surveys to enable comparisons.
