"Americans Are Wary of the Role Social Media
Sites Play in Delivering the News"

About Pew Research Center

Pew Research Center is a nonpartisan fact tank that informs the public about the issues, attitudes and trends shaping the world. It does not take policy positions. The Center conducts public opinion polling, demographic research, content analysis and other data-driven social science research. It studies U.S. politics and policy; journalism and media; internet, science and technology; religion and public life; Hispanic trends; global attitudes and trends; and U.S. social and demographic trends. All of the Center's reports are available at www.pewresearch.org. Pew Research Center is a subsidiary of The Pew Charitable Trusts, its primary funder.

Americans Are Wary of the Role Social Media Sites Play in Delivering the News

Getting news from social media is an increasingly common experience; nearly three-in-ten U.S. adults do so often

As heated debate continues over how social media sites can improve the quality of news on their platforms while enforcing rules fairly, most Americans are pessimistic about these efforts and are highly concerned about several issues when it comes to social media and news.

Majorities say that social media companies have too much control over the news on their sites, and that the role social media companies play in delivering the news on their sites results in a worse mix of news for users. At the same time, social media is now a part of the news diet of an increasingly large share of the U.S. population.

These findings are based on a survey conducted July 8-21, 2019, among 5,107 U.S. adults who are members of Pew Research Center's American Trends Panel. The study also examines Americans' perceptions of the biggest problems when it comes to social media and news, the political slant of news posts they see on social media, and which sites they go to for news.

Almost all Americans – about nine-in-ten (88%) – recognize that social media companies have at least some control over the mix of news people see. And most Americans feel this is a problem: About six-in-ten (62%) say social media companies have too much control over the mix of news

that people see on their sites, roughly four times as many as say that they don't have enough

Many say social media companies have too much control over the news people see ...

% of U.S. adults who say social media companies have ___ over the mix of news that people see

PEW RESEARCH CENTER

control (15%). Just 21% say that social media companies have the right amount of control over the news people see.

The largest social media platforms control the content on their feeds using [computer algorithms](#) that [rank and prioritize posts and other content](#) tailored to the interests of each user. These sites allow users to [customize these settings](#), though previous research has found that many Americans [feel uncertain](#) about why certain posts appear in their news feed on Facebook specifically. Social media companies have also been public about their efforts to [fight](#) both false information and [fake accounts](#) on their sites.

While social media companies [say these efforts](#) are meant to make the news experience on their sites better for everyone, most Americans think they just make things worse. A majority (55%) say that the role social media companies play in delivering the news on their sites results in a worse mix of news. Only a small share (15%) say it results in a better mix of news, while about three-in-ten (28%) think their efforts make no real difference.

While most Americans are pessimistic about the control social media companies have over the news people see, Republicans tend to be more negative than Democrats. Three-quarters of Republicans and Republican-leaning independents say social media companies have too much control over the mix of news that people see, compared with about half (53%) of Democrats and Democratic leaners. More Republicans (66%) than Democrats (49%) also say that these efforts result in a worse mix of news for users.

Republicans more skeptical about social media companies' role in the mix of news on their sites

% of U.S. adults who say social media companies have ___ over the mix of news that people see

PEW RESEARCH CENTER

Most say that social media companies favor certain types of news organizations

A large majority of Americans believe that social media companies favor some news organizations over others. About eight-in-ten U.S. adults (82%) say social media sites treat some news organizations differently than others, about five times the share saying all news organizations are treated the same (16%).

Social media companies do have established policies when it comes to publishers, including prioritizing [certain news sources](#), banning or [limiting](#) others that produce lower-quality content, and using their monetization policies to discourage [particular behaviors](#).

Among those U.S. adults who say social media companies treat some news organizations

differently than others, there is broad agreement that they favor three types: those that produce attention-grabbing articles (88%), those with a high number of social media followers (84%) and those whose coverage has a certain political stance (79%).

While large social media companies have [announced initiatives](#) to [favor high-quality news publishers](#) in an effort to improve the news on their sites, fewer who say some news organizations are treated differently believe social media companies favor organizations that are well-established (56%), have high reporting standards (34%) or have politically neutral coverage (18%).

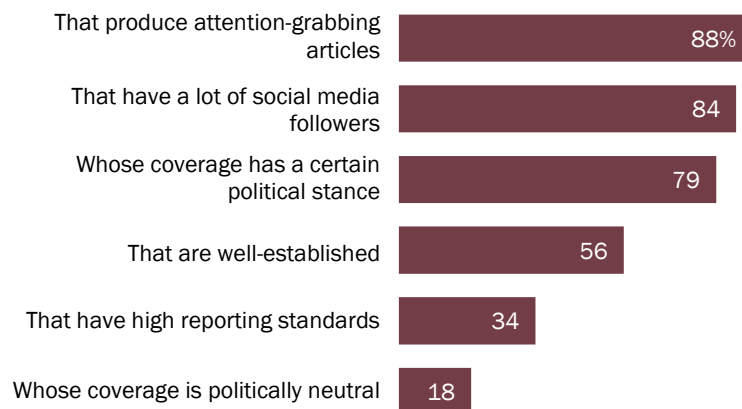

About eight-in-ten say social media companies treat some news organizations differently than others ...

PEW RESEARCH CENTER

Americans are most concerned about biased and inaccurate news on social media; many say the news content they see leans left

Many people – [including President Donald Trump](#) – have voiced concerns about social media companies potentially censoring the news that people see, whether by [hiding posts](#) or by [banning specific users](#).

But in spite of the [public discussion](#) around potential censorship and [efforts to monitor](#) it, Americans are more concerned with the overall low quality of news available on social media sites. Of the seven issues asked about, about half of U.S. adults say that one-sided news (53%) and inaccurate news (51%) are very big problems when it comes to news on social media. Fewer say that censorship of the news (35%) or news organizations or personalities being banned (24%) are very big problems.

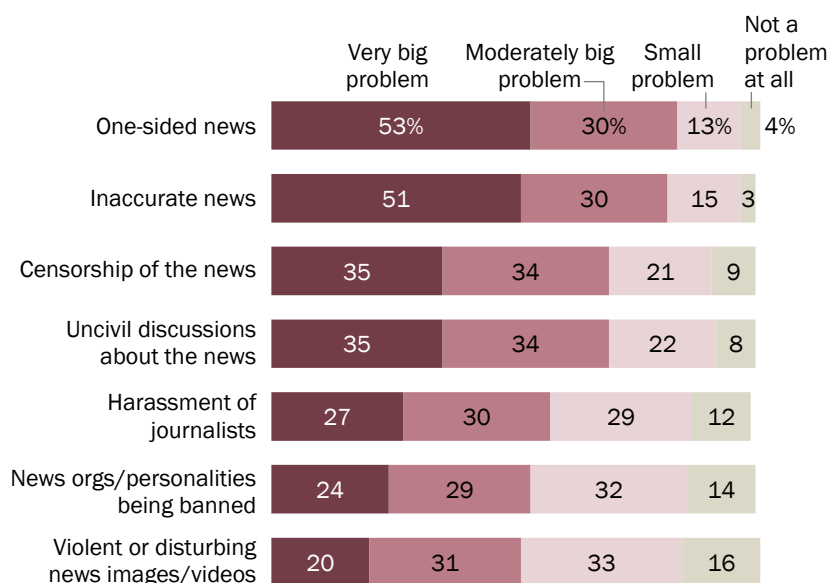

As large majorities say that the [tone of American political debate has become more negative in recent years](#), about

a third of U.S. adults (35%) say that uncivil discussions about the news are a very big problem when it comes to news on social media. Additionally, about a quarter (27%) say that the harassment of journalists is a very big problem associated with news on social media.

Republicans and Democrats disagree somewhat about which issues on social media are very big problems, especially when it comes to censorship and harassment. Republicans and Republican leaners are more likely to see censorship of the news as a very big problem on social media (43%) than Democrats and Democratic leaners (30%). Democrats, on the other hand, are about twice as

One-sided and inaccurate news seen as the biggest problems with news on social media

% of U.S. adults who say each is a ___ when it comes to news on social media

Note: Respondents who did not give an answer are not shown.

PEW RESEARCH CENTER

likely as Republicans to say that harassment of journalists is a very big problem (36% vs. 17%). Despite these differences, one-sided news and inaccurate news top the list among both Republicans and Democrats.

Many Americans also say that the news posts they see on social media tend to lean to the left ideologically. Nearly half of social media news consumers (48%) describe the posts about news they see there as liberal or very liberal. A much smaller share – 14% – say the news posts they see are conservative or very conservative, while 36% say the news they see is moderate.

Republicans are more likely to see a liberal lean than Democrats, a plurality of

whom describe the news on social media as moderate. Among social media news consumers, Republicans are more likely to say that the news they see leans liberal or very liberal (64%) than are Democrats (37%). And social media news consumers who are conservative Republicans are especially likely to say that the news leans left: 73% describe the news posts they see as liberal or very liberal.

Social media news consumers say the news posts they see generally lean more liberal than conservative

"Americans Are Wary of the Role Social Media Sites Play in Delivering the News"

PEW RESEARCH CENTER

Share of Americans who get news on social media has recently increased

Getting news from social media sites is an increasingly common experience. About three-in-ten Americans now get news on social media often (28%), up from 20% in 2018. More than half of U.S. adults get news from social media often or sometimes (55%), up from 47% in 2018. About two-in-ten (18%) say they hardly ever get news from social media, and 27% never get news from social media.

"Americans Are Wary of the Role Social Media Sites Play in Delivering the News"

PEW RESEARCH CENTER

Facebook is the dominant social media news source

Facebook is far and away the social media site Americans use most commonly for news. About half (52%) of all U.S. adults get news there.

The next most popular social media site for news is YouTube (28% of adults get news there), followed by Twitter (17%) and Instagram (14%). A number of other social media platforms (including LinkedIn, Reddit and Snapchat) have smaller news audiences.

Social media sites as pathways to news

PEW RESEARCH CENTER

Even though news on Facebook reaches the most Americans, other sites have similarly large portions of their users getting news on their platforms.

Along with Facebook, Twitter and Reddit stand out as the sites where the highest proportion of users get news – 73% of Facebook’s users do so, as do 71% of Twitter’s and 62% of Reddit’s users. However, because Facebook’s overall pool of users is much larger than those of Twitter or Reddit, far more Americans overall get news on Facebook than on the other two sites.

The other sites studied – including YouTube, Instagram, LinkedIn, Snapchat, Tumblr, WhatsApp and Twitch – have less of a news focus among their users. Fewer than half of the users on each of these sites use the site for news. Only a small share of users of Twitch – [a livestreaming website](#) – say they get news on this platform (10%).

Facebook, Twitter, Reddit are the sites with the most news-focused users

PEW RESEARCH CENTER

Demographics of American social media news consumers

The makeup of social media sites' news users differs considerably from one site to the next. For example, white adults make up more than half of news users on Reddit (65%), Facebook (61%), Twitter (58%) and LinkedIn (58%), while there are more nonwhite news users on Snapchat and Instagram. (For most sites, black and Hispanic adults are about equally likely to get news there, but Hispanic adults are twice as likely as black adults to use Snapchat – 36% vs. 18% – and three times as likely to use Reddit, 15% vs. 5%.) Facebook, Snapchat and Instagram have a higher proportion of women among their news users, while YouTube and Reddit news users are more likely to be men. And about seven-in-ten (69%) of Snapchat's news consumers are ages 18 to 29, more than any other site.

Profiles of social media news consumers in the U.S.

% of each social media site's news consumers who are ...

	Facebook	YouTube	Twitter	Instagram	LinkedIn	Snapchat	Reddit
Male	39%	57%	52%	38%	54%	35%	70%
Female	61	43	48	62	46	65	30

Methodology

The American Trends Panel survey methodology

The American Trends Panel (ATP), created by Pew Research Center, is a nationally representative panel of randomly selected U.S. adults. Panelists participate via self-administered web surveys. Panelists who do not have internet access at home are provided with a tablet and wireless internet connection. The panel is being managed by Ipsos.

Data in this report are drawn from the panel wave conducted July 8 to July 21, 2019. A total of 5,107 panelists responded out of 7,031 who were sampled, for a response rate of 73%. This does not include four panelists who were removed from the data due to extremely high rates of refusal or straightlining. The cumulative response rate accounting for nonresponse to the recruitment surveys and attrition is 5.1%. The break-off rate among panelists who logged onto the survey and completed at least one item is 0.8%. The margin of sampling error for the full sample of 5,107 respondents is plus or minus 1.7 percentage points.

American Trends Panel recruitment surveys

Recruitment dates	Mode	Invited	Joined	Active panelists remaining
Jan. 23 to March 16, 2014	Landline/ cell RDD	9,809	5,338	2,500
Aug. 27 to Oct. 4, 2015	Landline/ cell RDD	6,004	2,976	1,463
April 25 to June 4, 2017	Landline/ cell RDD	3,905	1,628	800
Aug. 8 to Oct. 31, 2018	ABS/web	9,396	8,778	8,679
	Total	29,114	18,720	13,442

Note: Approximately once per year, panelists who have not participated in multiple consecutive waves or who did not complete an annual profiling survey are removed from the panel. Panelists also become inactive if they ask to be removed from the panel.

PEW RESEARCH CENTER

The subsample from the ATP was selected by grouping panelists into five strata so demographic groups that are underrepresented in the panel had a higher probability of selection than overrepresented groups:

- Stratum A consists of panelists who are non-internet users. They were sampled at a rate of 100%.
- Stratum B consists of panelists with a high school education or less. They were sampled at a rate of 100%.
- Stratum C consists of panelists that are Hispanic, unregistered to vote or non-volunteers. They were sampled at a rate of 60.3%.

- Stratum D consists of panelists that are black or 18-34 years old. They were sampled at a rate of 26%.
- Stratum E consists of the remaining panelists. They were sampled at a rate of 18.9%.

The ATP was created in 2014, with the first cohort of panelists invited to join the panel at the end of a large, national, landline and cellphone random-digit-dial survey that was conducted in both English and Spanish. Two additional recruitments were conducted using the same method in 2015 and 2017, respectively. Across these three surveys, a total of 19,718 adults were invited to join the ATP, of which 9,942 agreed to participate.

In August 2018, the ATP switched from telephone to address-based recruitment. Invitations were sent to a random, address-based sample (ABS) of households selected from the U.S. Postal Service's Delivery Sequence File. In each household, the adult with the next birthday was asked to go online to complete a survey, at the end of which they were invited to join the panel. For a random half-sample of invitations, households without internet access were instructed to return a postcard. These households were contacted by telephone and sent a tablet if they agreed to participate. A total of 9,396 were invited to join the panel, and 8,778 agreed to join the panel and completed an initial profile survey. Of the 18,720 individuals who have ever joined the ATP, 13,442 remained active panelists and continued to receive survey invitations at the time this survey was conducted.

The U.S. Postal Service's Delivery Sequence File has been estimated to cover as much as 98% of the population, although some studies suggest that the coverage could be in the low 90% range.¹

Weighting

The ATP data were weighted in a multistep process that begins with a base weight incorporating the respondents' original survey selection probability and the fact that in 2014 and 2017 some respondents were subsampled for invitation to the panel.

Weighting dimensions

Variable	Benchmark source
Gender	2017 American Community Survey
Age	
Education	
Race/Hispanic origin	2018 CPS March Supplement
Hispanic nativity	
Home internet access	
Region x Metropolitan status	2017 CPS Volunteer Supplement
Volunteerism	2016 CPS Voting and Registration Supplement
Voter registration	Average of the three most recent Pew Research Center telephone surveys.

Note: Estimates from the ACS are based on non-institutionalized adults. Voter registration is calculated using procedures from Hur, Achen (2013) and rescaled to include the total US adult population.

PEW RESEARCH CENTER

¹ AAPOR Task Force on Address-based Sampling. 2016. "[AAPOR Report: Address-based Sampling.](#)"

The next step in the weighting uses an iterative technique that aligns the sample to population benchmarks on the dimensions listed in the accompanying table.

Sampling errors and test of statistical significance take into account the effect of weighting. Interviews are conducted in both English and Spanish, but the American Trends Panel's Hispanic sample is predominantly U.S. born and English speaking.

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the 95% level of confidence for different groups in the survey:

Group	Unweighted sample size	Plus or minus ...
Total sample	5,107	1.7 percentage points
Social media news consumers	3,684	2.0 percentage points
Rep/Rep lean	2,130	2.7 percentage points
Dem/Dem lean	2,812	2.3 percentage points

Sample sizes and sampling errors for other subgroups are available upon request.
