THE BUILDING BLOCKS OF INNOVATION SURVEY

Our culture of innovation model has a total of six building blocks, 18 factors and 54 elements. (Each building block has three factors, and each factor consists of three elements.) Survey respondents should rate their organization on each of the 54 elements, on a scale of 1 to 5, using the following scale: 1 = Not at all; 2 = To a small extent; 3 = To a moderate extent; 4 = To a great extent; 5 = To a very great extent.

The overall average scores for elements are further averaged to provide the factor score, and the factor averages similarly result in the building block average. That average of the six building blocks is what we call the group's "Innovation Quotient." Please note that the value of the survey increases as the sample size increases, particularly when respondents come from different levels of the corporate hierarchy and different units of the company.
