

SEEBURGER iPaaS Now Certified and Globally Available on AWS

The SEEBURGER iPaaS offering on AWS empowers companies to operate sustainably with maximum availability in the cloud.

January 12, 2024 – Bretten, Germany – SEEBURGER, the global leader in business integration solutions, has certified its iPaaS solution on Amazon Web Services (AWS). SEEBURGER is now providing a secure and scalable iPaaS also on AWS to implement, manage and support integrations between applications, people and processes – no matter where these are located (in any cloud, in a hybrid environment or on-premises).

The SEEBURGER iPaaS utilizes AWS capabilities for:

- Flexible scalability to meet peak-load requirements
- Maximum availability and replication across multiple availability zones
- Operational cost efficiency with a transparent low-risk pricing model

On October 23, 2023, SEEBURGER completed the AWS Foundational Technical Review (FTR) of its iPaaS solution. This means that SEEBURGER iPaaS meets the security, reliability and operational excellence standards outlined in the AWS Well-Architected framework. The SEEBURGER iPaaS collaboration with AWS builds on an existing relationship between the two companies. More than 14,000 global companies have been utilizing the SEEBURGER BIS Platform and its integration services for many years, including running it on hyperscaler clouds such as AWS. SEEBURGER also offers cloud integration services and packaged integration services in the SEEBURGER Cloud.

The SEEBURGER iPaaS on AWS will enable customers to leverage SEEBURGER-operated AWS monitoring tools and SEEBURGER services such as platform operation and release management of the BIS Platform.

“The sustainability leadership of AWS in the cloud, combined with SEEBURGER’s iPaaS and integration expertise, enables our joint customers to focus on their core business while contributing to their sustainability goals,” said Holger Fiederling, Vice President, Cloud Customer Engagement at SEEBURGER.

As a successful example of this partnership, a global logistics company that transports more than 100,000 pallets per day is using the SEEBURGER iPaaS on AWS to ensure zero downtime with maximum availability, flexibility and scalability. SEEBURGER also provides the company with a comprehensive SLA that guarantees the highest possible 24/7 service quality.

“AWS has pioneered the use of renewable energy. The cloud infrastructure that hosts our customers’ workloads will increasingly be powered by clean sources, which contributes to more sustainable business models,” said Michael Bader, Senior Account Manager at AWS.

SEEBURGER iPaaS will soon be available in the AWS Marketplace.
